

Sprint 2 Week 2 — Team B Core MVP

BA Acceptance Testing

Project: Intern Management System for Social Enterprise Workforce Development

Client: Food Systems Collective (FSC)

Team: Team 40 / Team B

Role: Business Analyst

Business Analyst: Shakthijhaa Sivagnanam

Student ID: s4065078

Task: Sprint 2 Week 2 Team B Implementation — BA Acceptance Testing

Sprint: Sprint 2 — Week 2

Review date: 27 September 2026

1. Purpose and Review Basis

This document records the BA acceptance testing of the completed Sprint 2 Week 2 Team B implementation. The review checks the actual working Task & Progress Management Core MVP against the confirmed Week 2 requirements baseline, the approved Assigned → In Progress → Submitted → Completed lifecycle and the applicable requirement changes confirmed through the 23 September client feedback re-alignment.

Testing was performed directly against the working Team B frontend and local backend connected to the shared Supabase project. The review records each applicable criterion as PASS, FAIL or BLOCKED and separates confirmed requirement defects from shared Sprint 3 integration dependencies or evidence limitations.

2. Evidence Reviewed and Test Setup

- Working Team B Vercel frontend used for Mentor and Intern acceptance testing.
- Local NestJS backend on localhost:3000 with /api/health returning connectionStatus=true.
- Shared Supabase database/storage connected through the backend.
- Temporary Team 40 test identities: Team 40 Test Mentor and Team 40 Test Intern 1.
- Main lifecycle task: BA Week 2 Acceptance Test — High priority — due 02/10/2026.
- Dedicated negative validation task: BA W2 Submission Validation Test — Low priority — due 03/10/2026.
- Screenshot evidence EV00–EV22 plus four supporting screenshots captured during the acceptance run.
- Confirmed Week 2 BA baseline and 23 September client feedback re-alignment used as the business-rule basis.

Evidence rule: PASS is recorded only where the tested system behaviour matches the confirmed rule. FAIL is used where the implementation demonstrates behaviour that contradicts a confirmed requirement. BLOCKED is used where the current test data or confirmed business decision is not enough to verify the item. Deferred Sprint 3 shared integration work is not recorded as a Week 2 functional defect.

3. Acceptance Review Summary

PASS	FAIL	BLOCKED	DEFERRED / Sprint 3	Confirmed Core MVP defects
15	1	2	1	1

Overall acceptance position: The Sprint 2 Week 2 Team B Core MVP is accepted for the demonstrated lifecycle, Mentor review/completion, reference attachment, Weekly Progress and compact-summary behaviours. One confirmed requirement-level defect was found in Intern Task Submission validation: an attachment-only submission is accepted even though the confirmed rule requires a Submission Description.

4. Acceptance Matrix

AC ID	Acceptance focus	Result	Evidence basis	BA finding
W2-AC01	Mentor creates a valid task	PASS	EV01–EV02 show a completed Mentor assignment and successful creation.	Meets the confirmed Week 2 requirement.
W2-AC02	Initial status is Assigned	PASS	EV03–EV04 show the new task in Assigned state before work begins.	Initial lifecycle state is correct.
W2-AC03	Mentor reference attachment	PASS	EV04 and EV04B show the reference file in Task Detail and a successful download.	Client-confirmed reference attachment behaviour works.
W2-AC04	Assigned → In Progress	PASS	EV05 shows Start task changing the task to In Progress and exposing submission controls.	Forward lifecycle rule is met.
W2-AC05	Completely empty task submission rejected	PASS	EV06 shows blank Description + no file rejected while status remains In Progress.	Empty submission validation works.
W2-AC06	Submission Description required; attachment optional	FAIL	EV20–EV22 show blank Description + file accepted and persisted as Submitted.	Confirmed requirement mismatch; DEF-01.
W2-AC07	Valid task submission moves to Submitted	PASS	SUP-01 and EV07 show a valid submission and Submitted state.	Forward submission transition works.
W2-AC08	Submitted task cannot be edited/resubmitted by Intern	PASS	EV08 shows Submitted state after refresh with no edit/resubmit controls.	Post-submission lock works in tested UI.
W2-AC09	Mentor can review submitted content before completion	PASS	EV09–EV09B show Description, attachment and successful Mentor download before completion.	Mentor review behaviour works.
W2-AC10	Mentor completes Submitted task	PASS	EV10 shows Submitted → Completed and updated summary counts.	Mentor completion works.
W2-AC11	Completed task has no reverse/reopen control	PASS	EV10 and EV12 show Completed state with no reverse/reopen or lifecycle-skip controls.	Forward-only lifecycle is preserved in tested UI.
W2-AC12	Submission content remains accessible after completion	PASS	EV10–EV11 show Description/attachment retained and attachment still downloadable.	Post-completion submission access works in Mentor review.
W2-AC13	Weekly Progress required fields	PASS	EV14 shows empty required fields rejected with HTTP 400.	Required-field rule is enforced by backend.
W2-AC14	Valid Weekly Progress submission	PASS	EV15 shows HTTP 201 Created with Accomplishments, Blockers and Next Steps.	Valid Weekly Progress persists successfully.
W2-AC15	One Weekly Progress per Intern/reporting week	PASS	EV13 shows locked UI; EV16 shows duplicate POST rejected with HTTP 409.	Duplicate protection works for the stored reporting date.

AC ID	Acceptance focus	Result	Evidence basis	BA finding
W2-AC16	Mentor read-only Weekly Progress and compact summaries	PASS	EV17–EV18 and EV10 show Mentor read-only progress plus Intern/Mentor summary metrics.	Applicable client-confirmed Week 2 summary behaviour works.

5. Detailed BA Findings

5.1 Complete Assigned → In Progress → Submitted → Completed Lifecycle — PASS

The main BA test task was created by the Mentor, appeared to the Intern as Assigned, moved to In Progress when Start task was selected, moved to Submitted after a valid task submission and then moved to Completed only after Mentor review. The Completed state persisted on the Intern side and did not expose a reverse/reopen action.

W2-AC01 — PASS | W2-AC02 — PASS | W2-AC04 — PASS | W2-AC07 — PASS | W2-AC10 — PASS | W2-AC11 — PASS

5.2 Mentor Reference Attachment and Client-Confirmed Task Detail Change — PASS

The Mentor assignment form accepted an optional reference attachment. The Intern Task Detail displayed the reference file and the file downloaded successfully. This directly verifies the current-Sprint reference-attachment change confirmed through the 23 September client re-alignment.

W2-AC03 — PASS

5.3 Intern Task Submission Validation — FAIL

The completely empty submission case was correctly rejected. However, the dedicated negative test showed that when the Description was left blank and a file was attached, the system accepted the submission and moved the task to Submitted. The Mentor review then displayed “No submission description provided.” This contradicts the confirmed rule that Description is required and the attachment is optional.

W2-AC05 — PASS | W2-AC06 — FAIL

5.4 Submitted Lock and Mentor Review — PASS

After the valid main submission, the Intern no longer had submission/edit controls and the Submitted state persisted after refresh. The Mentor could review the submitted Description and attachment before completion and could download the submitted file.

W2-AC08 — PASS | W2-AC09 — PASS

5.5 Mentor Completion and Post-Completion Submission Access — PASS

The Mentor marked the main task Completed. The Mentor review continued to show the submitted Description and attachment after completion, and the attachment was still downloadable. The Intern view showed Completed and no reverse/reopen control.

W2-AC10 — PASS | W2-AC11 — PASS | W2-AC12 — PASS

5.6 Weekly Progress Validation and Review — PASS

Weekly Progress required-field validation rejected an empty request with HTTP 400. A valid report returned HTTP 201 Created. Re-submitting the same Intern/reporting date returned HTTP 409 Conflict. The Mentor review displayed the submitted Accomplishments, Blockers and Next Steps without edit controls.

W2-AC13 — PASS | W2-AC14 — PASS | W2-AC15 — PASS | W2-AC16 — PASS

5.7 Compact Task Status Summaries — PASS

The Intern Workspace displayed Total Tasks, Assigned, In Progress, Submitted, Completed, Overdue and Due Today. The Mentor Review screen displayed the same compact task-status categories for the test data. This verifies the client-confirmed current-Sprint summary requirement in the available Team 40 test setup.

6. Core MVP Defect Assessment and Follow-up

Confirmed Core MVP defects: 1. The confirmed defect is a requirement-level validation mismatch in Intern Task Submission.

DEF-01 — Submission Description is not enforced as required

- Confirmed rule: Submission Description is required; file attachment is optional.
- Negative test: Description left blank while BA_Test_Reference.txt.rtf was attached.
- Actual result: system accepted the submission and changed the task from In Progress to Submitted.
- Mentor evidence: Review Progress displayed “No submission description provided.” with the attachment present.
- Evidence: EV20, EV21 and EV22.
- DEV follow-up: enforce non-empty Description in both frontend and backend validation and re-test blank Description + attached file as a negative case.

7. Evidence Gaps / Shared Sprint 3 Dependencies

Gap / dependency	Status	BA note
Exact reporting-week date convention	BLOCKED	Duplicate protection works for the exact stored reporting date, but the business convention for what date represents the reporting week is still not formally confirmed.
Multi-Intern Mentor scope	BLOCKED	The client clarified that a Mentor may supervise multiple Interns, but the current temporary Team 40 test setup exposed one selectable test Intern, so multi-Intern scoping could not be independently demonstrated.
Final authenticated identity and Mentor–Intern RBAC	DEFERRED	Temporary Team 40 identities are still used. Final shared authentication and relationship-based authorization remain Sprint 3/shared integration work and are not Week 2 functional failures.

8. DEV / PM Handoff

- Accepted: full Assigned → In Progress → Submitted → Completed workflow for the tested positive path.
- Accepted: Mentor reference attachment, Mentor review/completion, submitted-content retention, Weekly Progress required fields/duplicate protection, Mentor read-only Weekly Progress and compact task summaries.
- Confirmed defect for DEV follow-up: DEF-01 — attachment-only task submission is accepted with a blank Description.
- Blocked/clarification items: exact reporting-week business convention and multi-Intern Mentor scoping with current temporary test data.
- Deferred shared integration: final authenticated identity and Mentor–Intern relationship/RBAC enforcement in Sprint 3.

7. BA Acceptance Outcome

The Sprint 2 Week 2 Team B Core MVP is accepted for the demonstrated functional behaviour, with one confirmed requirement-level defect requiring DEV follow-up. The main task lifecycle, Mentor review/completion, reference attachments, Weekly Progress controls and compact task summaries operate as expected in the tested environment.

DEF-01 must be corrected because the current implementation allows a task submission with no Description when an attachment is present. The remaining reporting-week convention, multi-Intern test coverage and final shared authentication/RBAC items are recorded separately as clarification, test-data or Sprint 3 integration dependencies rather than being treated as additional Week 2 functional failures.

Appendix A — Acceptance Testing Evidence

The screenshots below were captured during the Sprint 2 Week 2 BA acceptance run. They are included as direct backup evidence for the PASS, FAIL and BLOCKED findings recorded in this review.

Figure 1. Backend health check confirms connectionStatus=true.

The backend and database connection were working before the acceptance workflow was tested.

Evidence A1 — Backend health check confirms connectionStatus=true.

The screenshot shows a web browser window with multiple tabs. The active tab is 'Assign Task | IMS'. The browser's address bar shows the URL 'intern-management-system-frontend-pi.vercel.app/mentor/tasks/assign'. The page content is a form titled 'Assign task' with a 'Mentor' profile icon in the top right. The form has two tabs: 'Assign Task' (active) and 'Review Progress'. The form fields include: 'Task title *' with the value 'BA Week 2 Acceptance Test'; 'Description *' with the value 'Acceptance testing of the complete Sprint 2 Week 2 Team B Core MVP workflow.'; 'Reference file (optional)' with the value 'BA_Test_Reference.txt.rtf' and a 'Remove' button; 'Due date *' with the value '2026-10-02' and a calendar icon; 'Assigned intern *' with a dropdown menu showing 'Team 40 Test Intern 1' and a note 'Temporary Team 40 Intern accounts are used for current DEV integration testing.'; 'Priority' with radio buttons for 'Low', 'Medium', and 'High' (selected); and 'Assigned by' with the value 'Team 40 Test Mentor (you)'. An 'Assign task' button is at the bottom right of the form.
