Sprint 3 — Applicant-to-Intern Transition BA Acceptance Validation

Project: Intern Management System for Social Enterprise Workforce Development
Client: Food Systems Collective (FSC)
Team: Team 40 / Team B
Role: Business Analyst
Business Analyst: Shakthijhaa Sivagnanam
Student ID: s4065078
Task: Applicant-to-Intern Onboarding Journey Acceptance Validation
Sprint: Sprint 3
Review date: 18 October 2026
Document status: FINAL BA ACCEPTANCE EVIDENCE

1. Purpose and Review Basis

This document records the Business Analysis acceptance validation of the completed Applicant-to-Intern journey in the integrated Food Systems Collective Intern Management System (IMS). The validation focuses on the agreed shared-identity and role-routing outcomes: an Applicant can register and return to the Team A application experience, a promoted Applicant is recognised as an Intern using the same shared account/profile, and the promoted user enters the Team B Intern workspace through the normal authenticated flow.

The test account devtest@gmail.com was used as the promoted Applicant-to-Intern identity. The post-promotion behaviour was validated directly in the deployed system. A separate fresh Applicant account, BA Final Applicant Test (baapptest@gmail.com), was created to independently verify the Applicant registration and fresh-login path.

PASS is recorded where the observed browser behaviour matched the required outcome. FAIL would be used for a reproducible requirement mismatch. No password values are included in this report.

2. Test Environment and Evidence

- Deployed frontend under test: https://intern-management-system-frontend-pi.vercel.app/.
- Browser: Google Chrome on macOS using fresh Incognito sessions for authentication checks.
- Applicant test identity: BA Final Applicant Test — baapptest@gmail.com.
- Promoted Applicant-to-Intern test identity: devtest@gmail.com — displayed as “dev test” in Team B.
- Evidence set: EV01–EV05, captured from the deployed application on 18 October 2026.
- Source baseline: existing Team A/B role-routing, shared-account continuity and Applicant-to-Intern transition requirements.

3. Acceptance Review Summary

PASS	FAIL	BLOCKED	Criteria assessed
6	0	0	6

Overall BA position: The tested Applicant-to-Intern journey passed all acceptance checks in scope. New Applicant registration and fresh login correctly entered the Team A application experience. The promoted devtest@gmail.com account was recognised as an Intern, retained the same login identity, automatically entered the Team B Intern Workspace and was prevented from using the former Applicant-only application route. No confirmed defect was identified in the tested transition behaviour.

4. Acceptance Matrix

ID	Acceptance focus	Result	Evidence	BA finding
01	Applicant registration	PASS	EV01	A new Applicant account was created successfully and entered the Team A /application experience.
02	Fresh Applicant login	PASS	EV02	The same new Applicant account signed in through /sign-in and returned to /application without manual routing.

03	Promoted Intern recognition	**PASS**	EV03	The promoted devtest@gmail.com identity was recognised in Team B as Intern and loaded the Intern Workspace.
04	Shared account/profile continuity	**PASS**	EV03–EV04	The promoted user continued to authenticate with the same devtest@gmail.com account; no separate Team B registration was required.
05	Automatic Intern workspace entry	**PASS**	EV03	Fresh authentication for the promoted account entered /intern/workspace through the normal role-aware flow.
06	Applicant route removed after promotion	**PASS**	EV04–EV05	When the promoted Intern requested the former /application route, the system redirected to /unauthorized and returned a 403 access outcome.

5. Detailed BA Findings

5.1 Applicant registration and login — PASS

A new account named BA Final Applicant Test was registered using baapptest@gmail.com. After account creation, the application routed directly to the Team A /application journey. A separate fresh Incognito sign-in using the same Applicant credentials again routed to /application. This confirms that the newly created account is treated as an Applicant and that the normal login flow returns the user to the Applicant experience.

5.2 Acceptance and Intern promotion outcome — PASS

The devtest@gmail.com test identity was used as the promoted Applicant-to-Intern account. In the deployed system, the promoted account was recognised as an Intern and no longer behaved as an Applicant. The validation focuses on the resulting promoted state and role behaviour across the shared IMS.

5.3 Shared account/profile continuity — PASS

The promoted user continued to authenticate using the same devtest@gmail.com account. Team B did not require a second Intern registration or an unrelated account. The Intern Workspace displayed the corresponding shared profile identity as “dev test”, supporting the required continuity between the promoted account and Team B.

5.4 Automatic Team B Intern workspace entry — PASS

After authentication, the promoted account entered /intern/workspace and loaded the Intern Workspace with Intern-specific navigation (Workspace, My Tasks and Weekly Progress). No manual role-specific URL entry was required for the successful Intern workspace result.

5.5 Post-promotion Applicant access — PASS

A direct request for /application using the promoted Intern account did not expose the Applicant application journey. The request was safely redirected to /unauthorized and displayed a 403 “You cannot access this page” outcome. This confirms that the former Applicant workspace is not usable after the account is operating as an Intern.

5.6 Defect position

Confirmed defects identified: 0. No tested Applicant-to-Intern transition behaviour contradicted the agreed role-routing and shared-account outcomes.

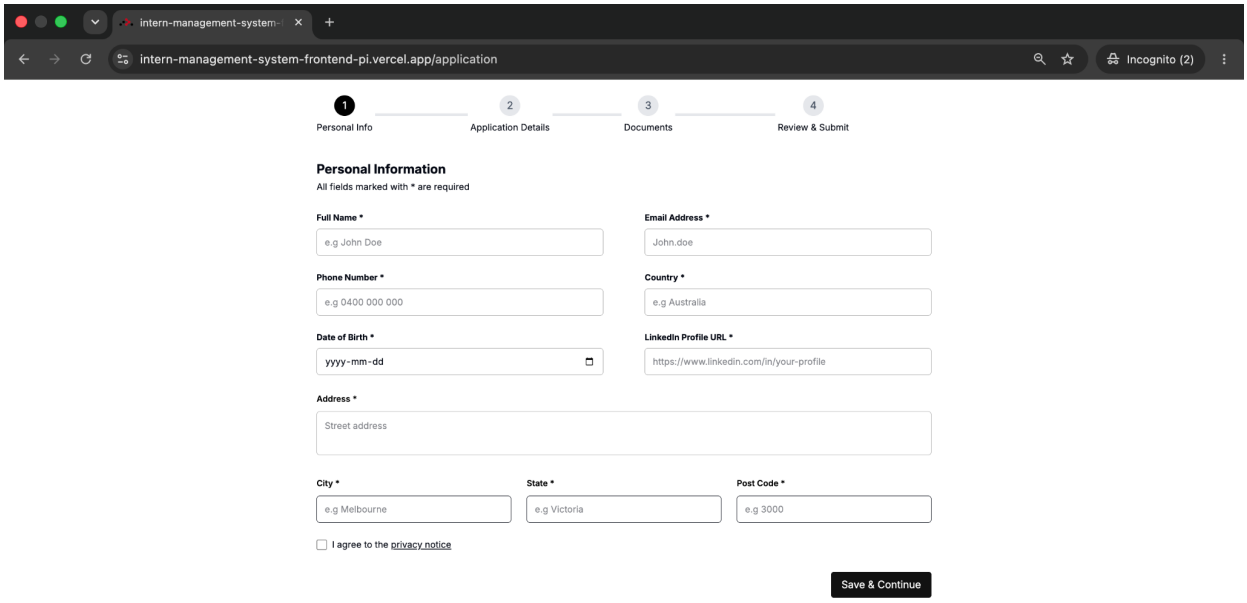

6. BA Acceptance Outcome

The Applicant-to-Intern transition is accepted for the tested deployed scope. The evidence demonstrates a working separation between the Applicant and Intern stages while preserving shared identity continuity: a newly registered Applicant enters Team A, while the promoted devtest@gmail.com account continues with the same login, is recognised as Intern, enters Team B automatically and cannot use the former Applicant-only route.

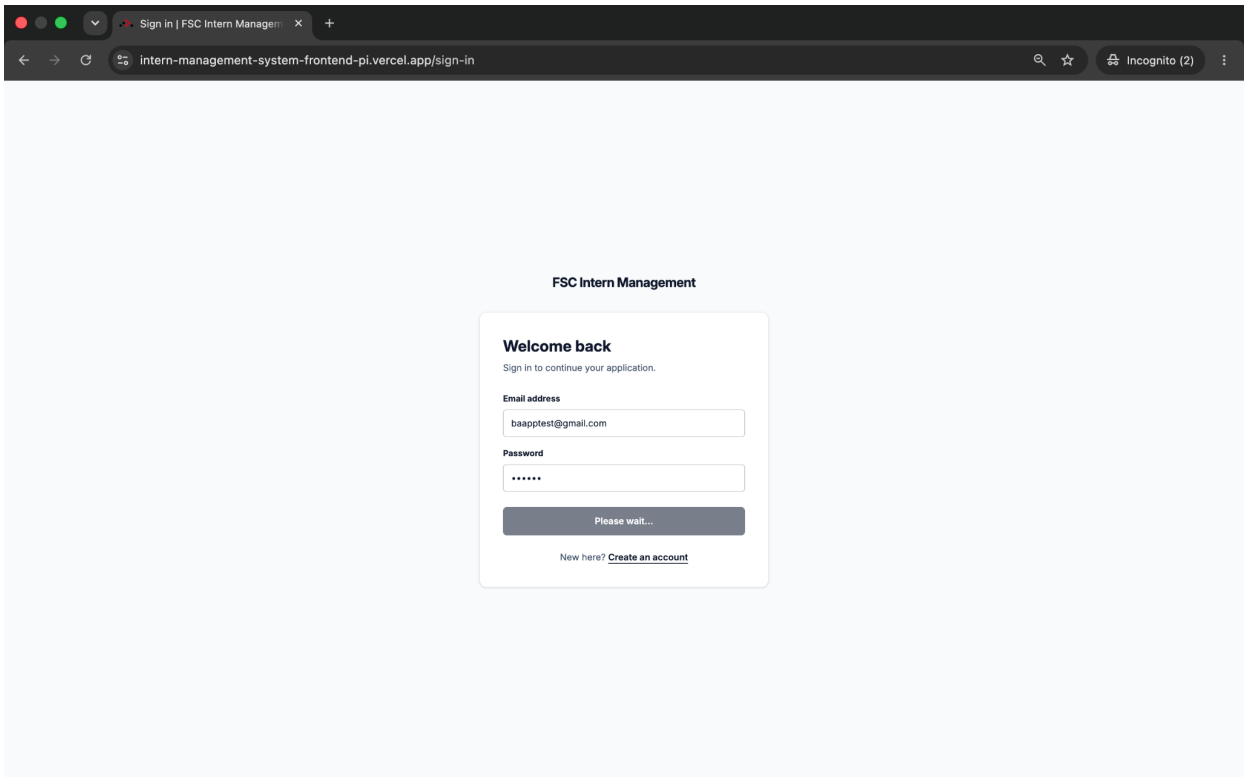

All six acceptance checks recorded in this report passed, with no FAIL or BLOCKED result in the tested scope.

Appendix A — Acceptance Evidence

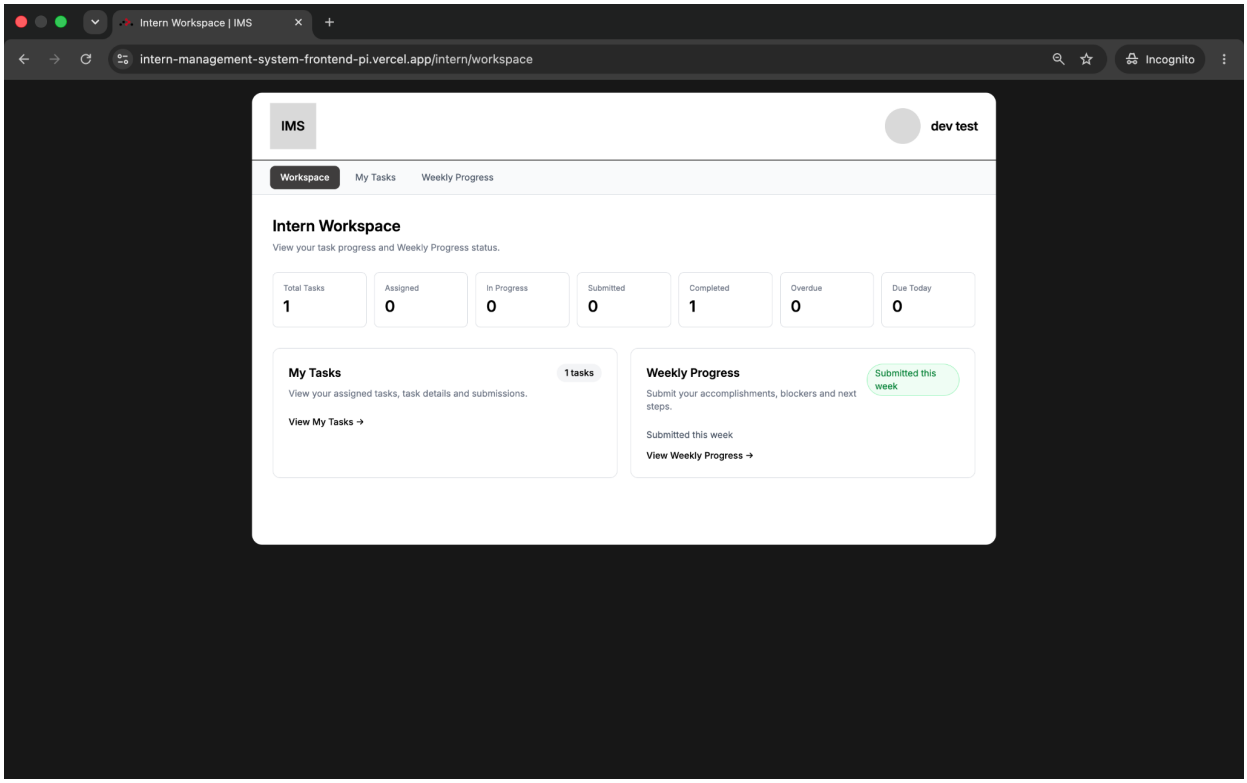

The screenshots below are the minimum evidence set used for this validation. They are ordered in the same sequence as the tested journey.

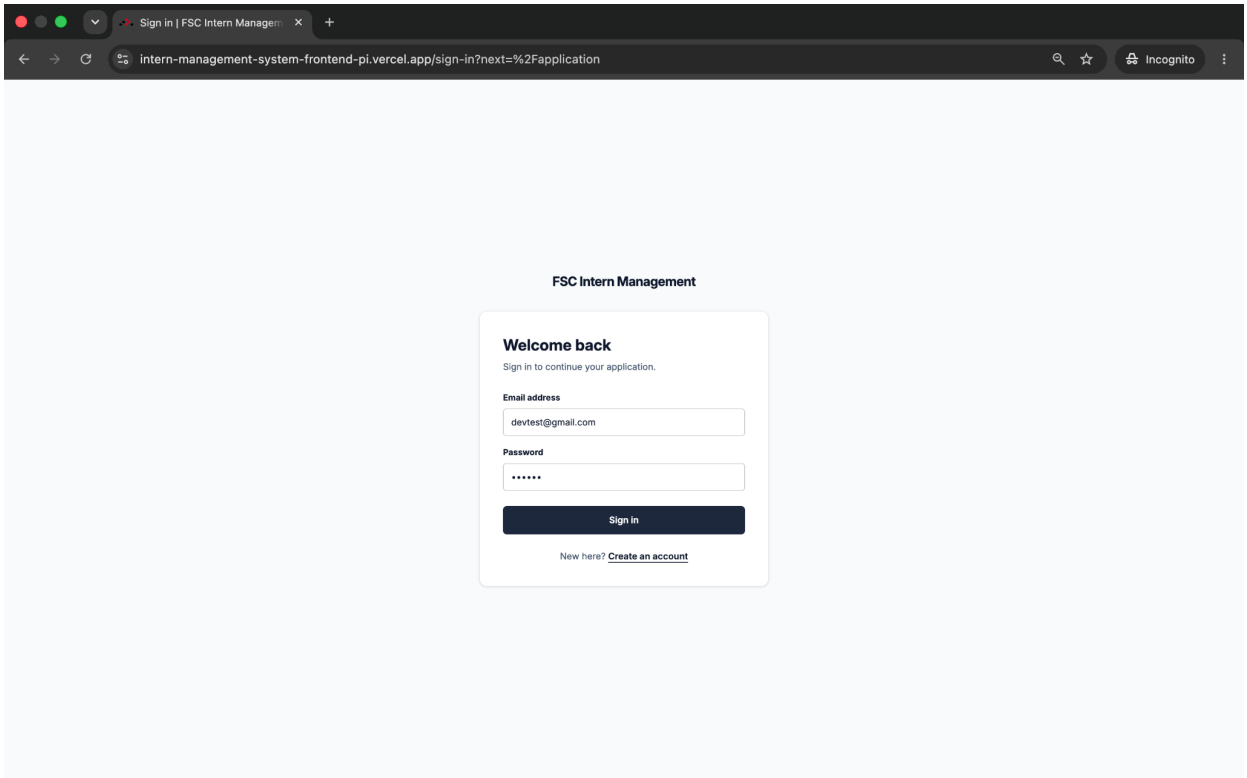

EV01 — New Applicant registration succeeded and routed to the Team A /application journey.

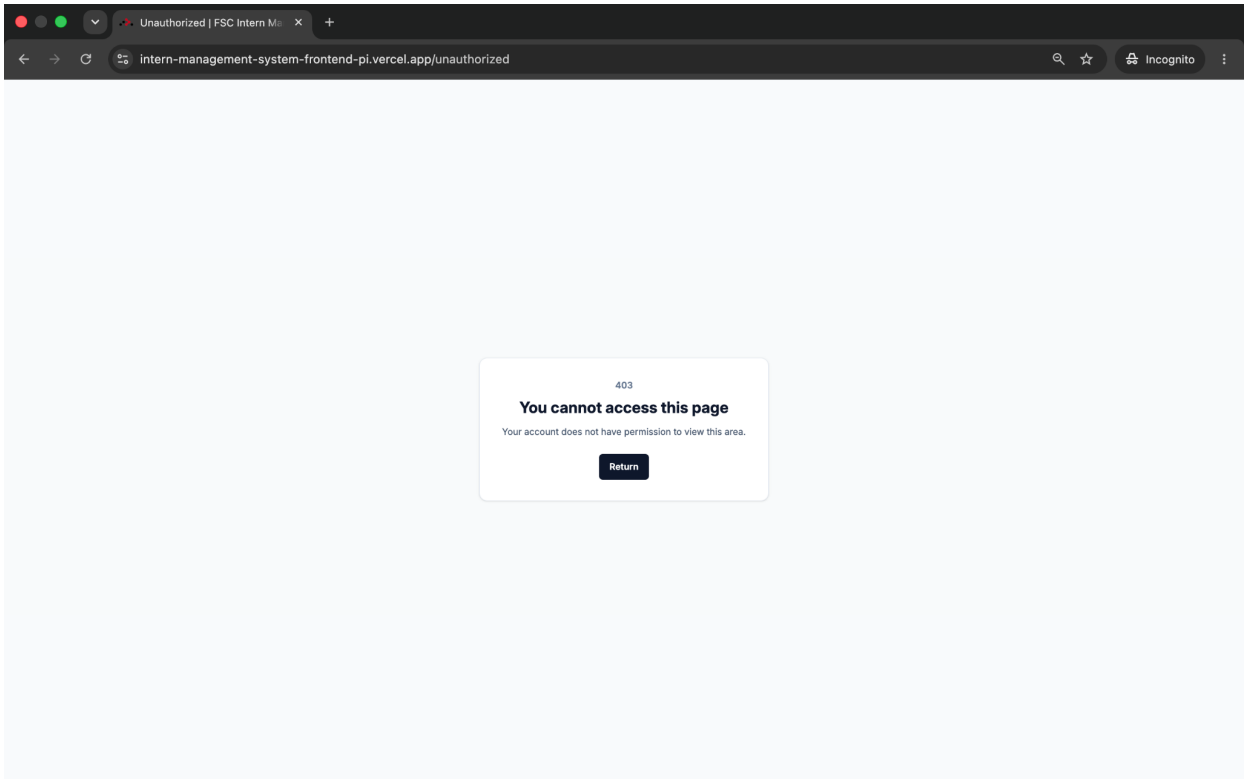

EV02 — Fresh login using baapptest@gmail.com returned to /application, confirming Applicant registration/login behaviour.

EV03 — Promoted devtest@gmail.com account entered the Team B /intern/workspace and loaded the Intern Workspace as "dev test".

EV04 — The same promoted test account was used to authenticate while requesting the former Applicant route.

EV05 — Promoted Intern access to the former /application route was denied with /unauthorized and a 403 access message.
