

Sprint 2 Week 1 — Task Management Vertical Slice

Implementation Clarifications & Acceptance Matrix

Project: Intern Management System for Social Enterprise Workforce Development

Client: Food Systems Collective (FSC)

Team: Team 40 / Team B

Role: Business Analyst

Business Analyst: Shakthijhaa Sivagnanam

Student ID: s4065078

Sprint: Sprint 2 — Week 1

Focus: Task Management vertical slice implementation clarification

Prepared: 17 September 2026

1. Purpose and Scope Freeze

This document provides the implementation clarifications required for the Sprint 2 Week 1 Task Management vertical slice. It uses the final Sprint 1 requirements and the Sprint 1 close-out handoff as the source of truth. It does not create a new requirements phase or introduce optional features.

The Week 1 build is intentionally limited to the task-management actions needed now: a permitted Mentor creates a task, the system creates it in Assigned status, the assigned Intern can view it, and the Intern can move it from Assigned to In Progress. Later lifecycle behaviour remains part of the wider Core MVP but is not allowed to block this Week 1 slice.

- No contradiction with the final Sprint 1 baseline.
- No new product scope is introduced.
- Every Week 1 user action is mapped to a testable acceptance statement.
- Role ownership and status responsibilities are frozen for this slice.
- Unresolved items not required for this build are explicitly deferred and non-blocking.

2. Source of Truth and Change-Control Rule

The following BA artifacts were reviewed. Later validated decisions take precedence over earlier working assumptions where the documents differ:

- Sprint 1 Close-Out — Requirements Refinement and Sprint 2 Handoff (latest consolidated BA handoff).
- Sprint 1 Week 3 — Final Team B Core MVP Requirements Baseline.
- Sprint 1 Week 2 — Team B Core MVP User Stories & Acceptance Criteria.
- Sprint 1 Week 2 — Applicant-to-Intern Transition & Cross-Team Requirements.
- Core MVP Detailed Wireframes — BA Feedback.
- BRD Requirements Review & Revised Team B Core MVP Alignment and the original BA requirements baseline.

Change-control rule: if implementation requires behaviour that is not defined below and is not required for the Week 1 vertical slice, it must be treated as deferred/non-blocking and raised with BA/PM rather than invented during development.

3. Frozen Week 1 Implementation Clarifications

3.1 Mentor Task Assignment — Exact Fields

For the Week 1 build, the Mentor-facing Task Assignment input is frozen as follows. There are no additional optional Mentor-entered fields required for this slice.

Field	Week 1 status	Input ownership	Implementation / validation rule
Task Title	Required	Mentor-entered	Must be provided; blank value is invalid.
Description	Required	Mentor-entered	Must be provided; blank value is invalid.
Due Date	Required	Mentor-entered	Must be provided. No additional future-date business rule is introduced by this clarification.
Assigned Intern	Required	Mentor-selected	Must identify an Intern within the Mentor's permitted relationship.
Priority	Required	Mentor-selected	Must be one of Low, Medium or High.
Assigned By / Mentor	Required task data	System-derived	Derived from the authenticated assigning Mentor; no separate manual selector.
Status	Required task data	System-derived	Automatically set to Assigned when the task is created; no manual initial-status selector.

3.2 Task Creation Behaviour

- Only an authenticated Mentor with access to the selected Intern may create the task.
- A valid task is stored and associated with the selected Intern and the authenticated assigning Mentor.
- Assigned By is derived from the authenticated Mentor and must not be separately entered by the user.
- The initial status is always Assigned and must not be manually chosen at creation.
- Missing required information, an invalid Priority value or an out-of-scope Intern relationship must prevent a valid task from being created.
- Task creation and authorization must be enforced by the backend; hiding UI controls is not sufficient security.

3.3 Intern Task Viewing and Week 1 Status Behaviour

- An authenticated Intern can view tasks assigned to that Intern and the task detail required for the slice.
- Visible task information includes Task Title, Description, Due Date, Priority, Assigned By / Mentor and current Status.
- A newly created task appears to the assigned Intern in Assigned status.

- The Week 1 Intern-controlled transition is Assigned → In Progress.
- When the Intern starts an Assigned task, the status becomes In Progress and the change is persisted.
- The Intern does not directly mark a task Completed. Submitted and Completed remain part of the wider lifecycle but are outside this Week 1 task-management slice.
- Skip, reverse and reopen behaviour is not required for Week 1 and must not be invented.

3.4 Mentor / Intern Role Permissions for This Slice

Role	Allowed in Week 1 slice	Explicit restriction
Mentor	Create a task for a permitted Intern; provide the five required Mentor-entered fields; view task information within the permitted Mentor–Intern context.	May not assign a task to an unrelated Intern. The Intern “start work” transition is not a Mentor action in this slice.
Intern	View own assigned tasks and task details; move own task from Assigned to In Progress.	May not view or modify another Intern's task. May not use Mentor-only task-assignment actions or directly self-complete a task.
Other / unrelated user	No Task Management action is granted by this BA slice.	Backend must deny access to unrelated task resources or actions.

3.5 Shared Account / Profile Continuity

- Team A continues to own Recruitment through the final Accepted/Rejected decision.
- The same shared IMS identity/account/profile is reused when the person operates as an Intern; Team B must not create a separate duplicate Intern account.
- Application status and system role are separate concepts. A recruitment outcome alone must not be treated as the complete authorization model.
- Week 1 Task Management should use the shared authenticated account/profile and role information supplied by the common foundation.
- The exact Applicant-to-Intern role/access transition mechanism and authorized actor remain shared implementation decisions. They are non-blocking for this slice where an authenticated test user is already available with the correct Mentor or Intern access.
- Backend role and resource authorization is required; frontend visibility is not the security boundary.

4. Frozen Validation and Business Rules

Rule ID	Rule	Frozen Week 1 requirement
VAL-01	Required task data	Task Title, Description, Due Date, Assigned Intern and Priority are required for task creation.
VAL-02	Priority	Priority must be Low, Medium or High.
VAL-03	Mentor–Intern relationship	The selected Intern must be within the authenticated Mentor's permitted relationship.

Rule ID	Rule	Frozen Week 1 requirement
VAL-04	Assigned By	Assigned By is derived from the authenticated Mentor; it is not manually selectable.
VAL-05	Initial status	Every successfully created task starts as Assigned.
VAL-06	Intern ownership	An Intern may retrieve and act on only their own permitted assigned tasks.
VAL-07	Week 1 status transition	The confirmed Week 1 transition is Assigned → In Progress and the change must persist.
VAL-08	Authorization	Role and resource checks must be enforced by the backend, not only by UI visibility.
VAL-09	Persistence	Created tasks and status changes must be retrievable with the stored values after the operation completes.
VAL-10	No invented rules	No additional optional fields, reverse transitions, task-submission behaviour or due-date business rules are introduced by this clarification.

5. Traceable Acceptance Matrix — Sprint 2 Week 1 Build

The matrix below is the implementation acceptance baseline for the Week 1 Task Management vertical slice. Each required user action is testable and traceable to the final Sprint 1 / close-out BA requirements.

ID	User action	Given	When	Then	Traceability
W1-AC01	Mentor creates a valid task	Authenticated Mentor has a permitted Intern.	Mentor provides Title, Description, Due Date, Assigned Intern and Priority and submits.	Task is stored and associated with the selected Intern and assigning Mentor.	Handoff §5.1 AC-01.1
W1-AC02	Required-field validation	One or more required Mentor-entered fields are missing.	Mentor attempts to create the task.	Task is not created and validation feedback is returned.	Final baseline AC-TA04 / VAL-01
W1-AC03	Priority validation	Mentor is creating a task.	Priority is selected.	Only Low, Medium or High is accepted and the selected value is stored.	Handoff §5.1 AC-01.2
W1-AC04	Assigned By derived	Authenticated Mentor creates a valid task.	Task is successfully saved.	Assigned By identifies that Mentor without a separate manual Mentor selection.	Handoff §5.1 AC-01.3
W1-AC05	Automatic Assigned status	A valid new task is being created.	System saves the task.	Initial status is Assigned; no manual initial-status selection is required.	Handoff §5.1 AC-01.4
W1-AC06	Mentor assignment access	User lacks Mentor permission or selected Intern is outside the permitted relationship.	Task assignment is attempted.	Backend denies the action and no valid task is created for the unrelated Intern.	Handoff §5.1 AC-01.5
W1-AC07	Intern views assigned task	Authenticated Intern has an assigned task.	Intern opens My Tasks / Task Detail.	Own assigned task is visible with task details, Priority, Assigned By and current Status.	Handoff §5.2 AC-02.1

ID	User action	Given	When	Then	Traceability
W1-AC08	Unrelated task access denied	Authenticated Intern attempts to access another Intern's task.	Task resource is requested.	Backend denies access and does not expose unrelated task data.	Sprint 1 access-control baseline
W1-AC09	Intern starts work	Intern owns a task currently in Assigned status.	Intern performs the permitted start-work action.	Status becomes In Progress and is persisted.	Handoff §5.2 AC-02.2
W1-AC10	No Intern self-completion	Intern views an In Progress task in this Week 1 slice.	Available task actions are presented or a completion action is attempted.	No direct Intern completion action is provided/accepted; later lifecycle actions remain outside this slice.	Handoff §5.2 AC-02.3
W1-AC11	Shared identity continuity	User is authenticated through the shared IMS foundation with valid Intern access.	Team B Task Management resolves the user.	Existing shared account/profile identity is used; no duplicate Team B Intern identity is created.	Handoff §5.6 / transition baseline
W1-AC12	Backend authorization	A task action or task-resource request is made.	Server processes the request.	Role plus permitted resource/relationship access is checked server-side before the action/data is allowed.	Handoff §5.6 RBAC requirement

6. Deferred / Non-Blocking Items for Week 1

The following items are deliberately not allowed to block the Week 1 Task Management build. They remain part of later Core MVP work or shared implementation decisions where applicable:

- Submitted → Completed behaviour, Task Submission review and Mentor completion confirmation beyond the Week 1 Assigned → In Progress slice.
- Individual Task Submission editing/replacement and any later submission-specific refinement.
- Reverse, skip, reopen or post-completion task-status transitions.
- Weekly Progress submission and any user-facing Weekly Progress-to-task linking.
- The exact Applicant-to-Intern role/access transition mechanism and authorized actor, provided the Week 1 test users already have the correct shared role/access.
- Full RLS policy design beyond the backend role/resource checks required to secure this Week 1 slice.
- Creation or management of Mentor–Intern relationships; Week 1 assumes a valid relationship exists.
- Prototype-only role switchers, wrong-role preview controls, broad Admin functions, onboarding, attendance and other out-of-scope features.

Important: Priority and Assigned By / Mentor are not deferred. They were adopted in the final Sprint 1 close-out handoff and are part of the Week 1 task model: Priority is Mentor-selected; Assigned By is system-derived.

7. Developer Handoff — What to Build Now

- Mentor can create a task for a permitted Intern using the five required Mentor-entered fields: Task Title, Description, Due Date, Assigned Intern and Priority.
- Assigned By is taken from the authenticated Mentor and the initial Status is automatically Assigned.
- Intern can retrieve/view only their own assigned tasks with the required task details.

- Intern can move an owned task from Assigned to In Progress and the change persists.
- Backend authorization enforces Mentor/Intern role ownership and permitted resource relationships.
- The shared IMS account/profile is reused; no duplicate Team B identity is created.
- Implementation is accepted against the Week 1 acceptance matrix in Section 5. Anything outside it that is unresolved is deferred unless BA/PM confirms a change.

8. BA Week 1 Build Readiness Position

The Task Management vertical slice is ready for Sprint 2 Week 1 implementation against this clarification baseline. The required Mentor inputs, system-derived fields, initial status behaviour, Intern viewing/start-work action, role ownership, shared identity assumption, validation rules and acceptance tests are unambiguous for the build.

Any request that changes these frozen Week 1 rules or adds functionality outside the acceptance matrix must be treated as a change and raised with BA/PM. Open items listed in Section 6 remain deferred/non-blocking and should not delay implementation of the confirmed slice.
