

Sprint 2 Week 3 — Team B Shared Authentication, Identity & RBAC BA Acceptance Validation

Project: Intern Management System for Social Enterprise Workforce Development

Client: Food Systems Collective (FSC)

Team: Team 40 / Team B

Role: Business Analyst

Business Analyst: Shakthijhaa Sivagnanam

Student ID: s4065078

Sprint: Sprint 2 — Week 3

Review date: 4 October 2026

1. Purpose and Review Basis

This document records the independent BA acceptance validation of the Week 3 Team B shared authentication, current-user identity, Applicant-to-Intern continuity, Mentor-Intern access model and minimum RBAC implementation.

The review is limited to the Team B Core MVP access behaviour. It verifies that Team B reuses the shared authenticated account/profile identity, resolves the signed-in Mentor and Intern correctly, allows permitted Mentor-to-Intern access, and rejects an unrelated Mentor-to-Intern access attempt. The review does not expand into full onboarding, Mentor Assignment or broader administration functionality.

2. Implementation Baseline Reviewed

- Backend PR #32 — Shared Authentication & Identity Integration.
- Frontend PR #15 — Shared Authentication & Identity Integration.
- Backend PR #33 — Applicant-to-Intern Handoff, Mentor-Intern Relationship & Minimum RBAC.
- Frontend PR #17 — Applicant-to-Intern Handoff, Mentor-Intern Relationship & Minimum RBAC.

The current minimum Mentor-Intern access model is relationship-based through existing task assignment ownership. A separate Mentor Assignment module or dedicated relationship table is not part of this acceptance scope.

3. Test Setup

- Deployed Team B frontend used for acceptance validation: intern-management-system-frontend-pi.vercel.app.
- Two simultaneous authenticated sessions were used: normal Chrome for Mentor and Incognito Chrome for Intern.
- Mentor session resolved as “Team 40 Test Mentor”.
- Intern session resolved the shared profile display name “This should work now”.
- A dedicated task, “RBAC BA Relationship Test”, was assigned from the authenticated Mentor to the authenticated Intern to validate the permitted relationship path.
- Team 40 Test Intern 2 was used as the unrelated Intern for the negative relationship-access test.

4. Acceptance Validation Summary

PASS	FAIL	BLOCKED
7	0	0

Overall acceptance position: All seven tested Team B shared authentication, identity and minimum RBAC criteria passed. No new defect was identified within the tested scope.

5. Detailed BA Validation Results

ID	Validation focus	Result	Evidence	BA finding
RBAC-01	Team B uses shared authentication	PASS	RBAC_EV01-EV02	Mentor and Intern both entered Team B through authenticated sessions.

ID	Validation focus	Result	Evidence	BA finding
				Team B pages loaded using the signed-in identities rather than permanent hard-coded Team 40 user IDs.
RBAC-02	Authenticated current-user identity	PASS	RBAC_EV01–EV02	The Mentor resolved as “Team 40 Test Mentor” and the Intern resolved as “This should work now”. Role-specific Team B pages used the authenticated current user.
RBAC-03	Shared account/profile continuity	PASS	RBAC_EV02–EV05	The authenticated Intern retained the shared profile display name in Team B and the same identity was selectable by the Mentor and received the assigned Team B task. No separate Team B identity was presented.
RBAC-04	Intern reaches correct Team B context	PASS	RBAC_EV02, RBAC_EV05	The authenticated Intern reached Intern Workspace/My Tasks, saw Intern-only navigation and received the task assigned to the same shared identity.
RBAC-05	Mentor role access	PASS	RBAC_EV01, RBAC_EV03–EV04	The authenticated Mentor accessed Mentor-only Assign Task and Review Progress functionality, and task assignment used the Mentor’s own resolved identity.
RBAC-06	Mentor–Intern relationship restriction	PASS	RBAC_EV03–EV06	The permitted path worked for the selected authenticated Intern. An unrelated Intern did not expose task data and the protected Weekly Progress relationship check rejected access.
RBAC-07	Unauthorised Mentor → Intern access rejected	PASS	RBAC_EV06	Selecting Team 40 Test Intern 2 produced “This Intern is not associated with the authenticated Mentor.” No Weekly Progress data was exposed.

6. Key Findings

Shared authentication and current-user identity: Team B correctly used the authenticated shared-user session for both Mentor and Intern contexts. The old permanent Team 40 identity behaviour was not observed in the tested Team B pages.

Shared account/profile continuity: The promoted Intern’s shared profile display name, “This should work now”, carried into Team B and was used consistently in the Intern Workspace, Mentor assignment workflow and resulting My Tasks record.

Minimum Mentor–Intern relationship: The authenticated Mentor could assign a task to the permitted Intern and the same Intern immediately received it. This validates the implemented minimum relationship model for the Core MVP.

Unauthorised access control: The unrelated Intern test was rejected with the explicit relationship error “This Intern is not associated with the authenticated Mentor.” The protected Weekly Progress data was not returned.

Role separation: Mentor and Intern sessions displayed their appropriate Team B navigation and workflows. No separate Team B authentication or onboarding flow was required for this validation.

7. BA Final Outcome

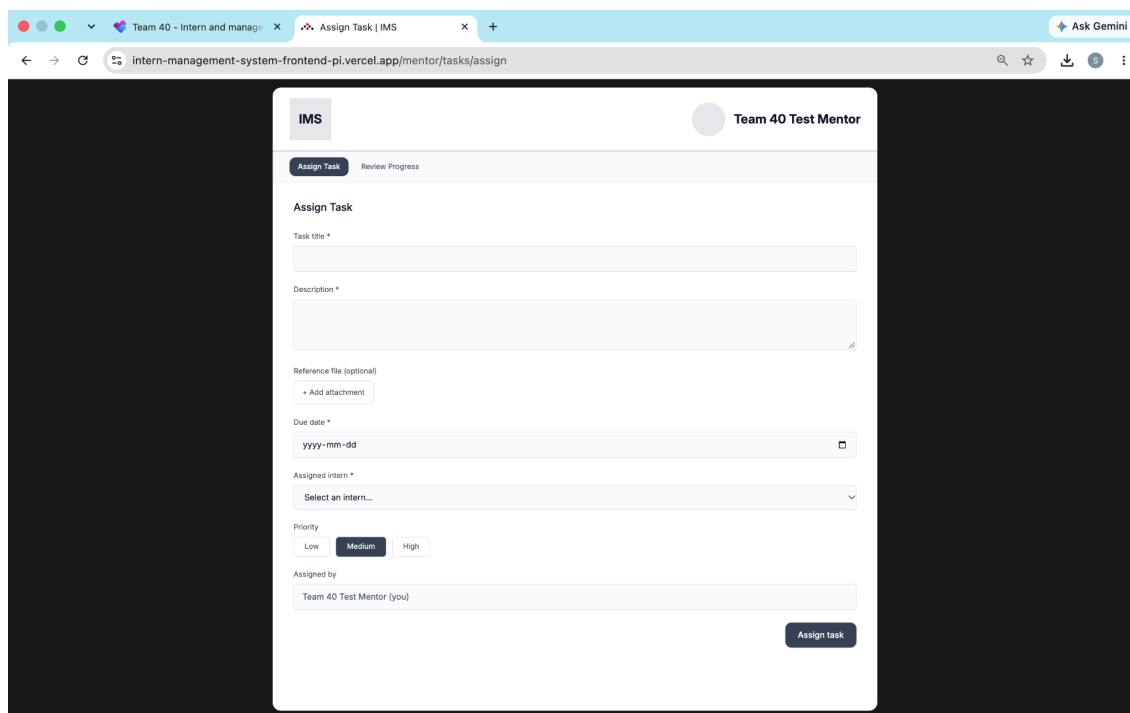

The Week 3 Team B shared authentication, identity and minimum RBAC integration is accepted for the tested Core MVP scope.

All seven applicable validation points passed with direct deployed-system evidence. The authenticated Mentor and promoted Intern identities were resolved correctly, shared profile continuity into Team B was demonstrated, the permitted Mentor-to-Intern workflow succeeded, and unrelated Mentor-to-Intern Weekly Progress access was rejected.

No new Team B defect was identified during this acceptance pass. The current task-assignment-based Mentor–Intern relationship model is accepted as the minimum Core MVP implementation reviewed here; a dedicated Mentor Assignment feature remains outside this acceptance scope.

8. Evidence Appendix

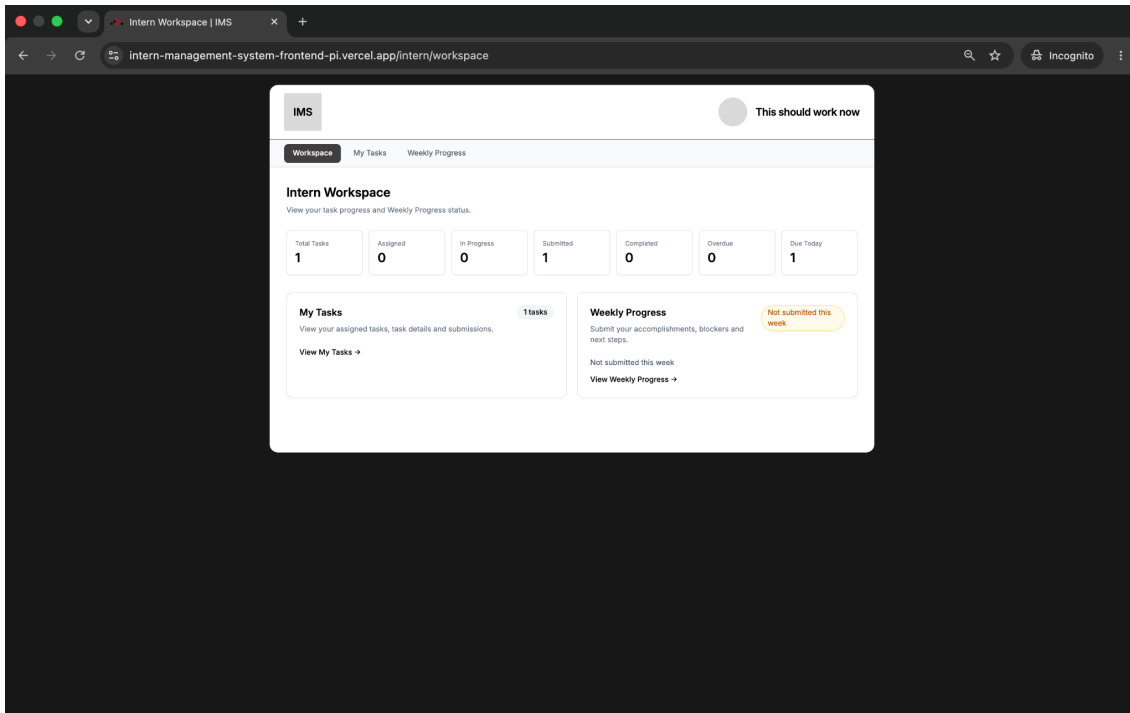

The following screenshots were captured during the deployed BA acceptance run. Only the key evidence required to support the validation outcome is included.

The screenshot displays a web browser window with two tabs: 'Team 40 - Intern and manage' and 'Assign Task | IMS'. The address bar shows the URL 'intern-management-system-frontend-pi.vercel.app/mentor/tasks/assign'. The page content is a form titled 'Assign Task' within the 'IMS' system. At the top right, the user is identified as 'Team 40 Test Mentor'. The form has two tabs: 'Assign Task' (active) and 'Review Progress'. The 'Assign Task' form includes the following fields and controls:

- Task title ***: A text input field.
- Description ***: A larger text area.
- Reference file (optional)**: A button labeled '+ Add attachment'.
- Due date ***: A date picker showing 'yyyy-mm-dd'.
- Assigned intern ***: A dropdown menu with the placeholder text 'Select an intern...'.
- Priority**: Three radio buttons labeled 'Low', 'Medium' (selected), and 'High'.
- Assigned by**: A text field showing 'Team 40 Test Mentor (you)'.
- Assign task**: A button at the bottom right of the form.

RBAC_EV01 — Authenticated Mentor access to the Team B Assign Task workflow. The page resolves the current user as “Team 40 Test Mentor” and uses that identity as the assigning Mentor.

RBAC_EV02 — Authenticated Intern access in a separate Incognito session. Team B resolves the shared profile display name “This should work now” and opens the correct Intern Workspace context.

Team 40 Test Mentor (you)

Assign task

Task assigned to This should work now (Low priority).

RBAC_EV04 — Mentor assignment succeeds for the authenticated Intern identity. The deployed Team B workflow confirms the task was assigned to “This should work now”.

RBAC_EV05 — The same authenticated Intern session receives “RBAC BA Relationship Test” in My Tasks, confirming the permitted Mentor-to-Intern path and identity continuity into Team B.

RBAC_EV06 — Unauthorised Mentor-to-Intern access is rejected. Team 40 Test Intern 2 has no permitted task relationship and Weekly Progress returns “This Intern is not associated with the authenticated Mentor.”
