

Intern Management System – Food Systems Collective

Streamlining Intern Recruitment for Food Systems Collective

- Core Issue: Food Systems Collective currently manages their intern recruitment system through an isolated group of spreadsheets, forms, and emails, which causes gaps in tracking recruitment and increases overhead.
- Team A Scope: We are developing a centralised recruitment management module, which allows applicants to apply online via an application submission and Resume upload and receive a clear Accepted or Rejected decision based on the Screening process. This progress should inspire confidence in our ability to improve the system and motivate the team.

Initial Plan – Sprint 1

- **Main Focus:** Establishing the foundation for the project from both an architectural and design standpoint; no current working features in this section.
- **Initial Deliverables:**
 - Create functional requirements and acceptance criteria for the project workflow.
 - Decide on a Shared database model, system boundaries and outline with Team B.
 - Design high-quality UX/UI wireframes and prototypes for applicant submission and admin review to motivate the team and reinforce their impact
 - Foundation Bootstrap/ Live Hosting Infrastructure required for Sprint 2.

Outcome and Deliverables – Sprint 1

- Shared Architecture agreed: Designed predefined roles (Applicant, Intern, Mentor and Admin) and Database Model agreed with Team B.
- Finalised Workflow for Core MVP Process: (Application > Submission > Data Storage > Admin View > Review > Status Update > Decision).
- UX Prototypes Completed: Interactive Wireframes for Applicant Resume upload and Admin review dashboard.
- Backend/Frontend Infrastructure is ready: Provisioned repository, dev/preview environment, and initial database config are ready for Sprint 2.

Value of Delivery / Impact

Alignment of Infrastructure:
Establishing a Shared Baseline for
Sprint 1 ensures shared
development between Team A and
Team B, which prevents a
disjointed final product.

Stability before Sprint 2:
Constructing the Foundation for the
project, including Database
schemas, UX Prototypes, and live
infrastructure, before starting
feature development prevents
issues with sprint reworks during
the feature process.

Quality over Quantity: Refining the
Core MVP Process maintains a
reliable, functional recruitment
process rather than an incomplete
final module.

Dependencies and Unresolved Risks

Application to Intern Transition Process: Data Handoff when an applicant is marked as “Accepted” requires Validation from Team B before final implementation.

Role Management Implementation: The Role Management Interface will be pushed to Sprint 3 to deliver a functioning product by the end of Sprint 2.

Mentor-to-Intern Assignment Baseline: Work with Team B to ensure a predefined baseline for the intern and Mentor to prevent issues with Progress blocking.

Team 39 Workload and Deliverables for Sprint 1

- Declan Thomas - (PM – 12 Hours Logged): Oversight of Project, Proposal and Scope Documentation Creation with Team B.
- Abdifatah Hashi - (BA – 12 Hours Logged): User Stories, Definition of Requirements, Acceptance Criteria and Workflow mapping.
- Wyatt Truong - (UX – 12 Hours Logged): Figma Prototypes for Applicant Submission, Applicant Profile view, Admin Interface/ Dashboard.
- Ilya Kosobrukhov - (Dev – 12 Hours Logged): Frontend environments setup and prepared for sprint 2; including repositories, infrastructure and tooling configuration. Documentation of relevant procedures.
- Sameer Siddiqui - (Dev – 12 Hours Logged): Backend infrastructure setup and deployment to Render; Database schema and migration files setup. Health API endpoint for monitoring.

Sprint 1 Review and Sprint 2 Expectations

- Deliverables for this Sprint
 - Initial Kickoff Meeting with Client
 - Alignment of Team A and Team B's technical requirements
 - Finalising Proposal foundations and refining the scope agreement with the client
- Expectations for Sprint 2
 - Deploy agreed feature foundations with Client and Team B
 - Build the Core MVP workflow into a functional Demo (Applicant submits application > Admin Reviews applicant > Admin Accepts or Rejects Applicant)
