

Team B Core MVP Pre-Client-Feedback Requirements Baseline

Project: Intern Management System for Social Enterprise Workforce Development

Client: Food Systems Collective (FSC)

Team: Team 40 / Team B

Role: Business Analyst

Business Analyst: Shakthijhaa Sivagnanam

Student ID: s4065078

Sprint: Sprint 2 — Week 2

Prepared: 26 September 2026

Task purpose: Core MVP consolidation before Client Feedback & Core MVP Requirements Re-alignment (BA2)

1. Purpose

This document consolidates the Team B Core MVP requirements and business rules established through Sprint 1, Sprint 2 Week 1, completed Week 2 implementation preparation, approved UX handoffs and recorded PM/cross-team direction. It provides one clear implementation baseline covering Task Management, Individual Task Submission, Mentor Review / Completion and Weekly Progress.

This is the pre-client-feedback comparison baseline for the following BA2 re-alignment task. The 23 September client feedback is intentionally not incorporated into the requirements below; that feedback is assessed separately in BA2.

2. Evidence Reviewed

The supplied source packs were reviewed across BA, UX, DEV and PM/cross-team material. Where later pre-feedback evidence clearly superseded an earlier working assumption, the later validated position is used.

- BA: original requirements, BRD review, Applicant-to-Intern requirements, Core MVP user stories and acceptance criteria, BA wireframe feedback, Sprint 1 final baseline, Sprint 2 handoff, Week 1 Task Management clarifications and acceptance review.
- UX: user-flow definition, detailed wireframes, BA feedback response, shared IMS alignment, Priority / Assigned By addendum, Mentor Task Assignment developer handoff, Task Management implementation review and Remaining Core MVP developer handoff.
- DEV: Sprint 2 technical baseline, Core Data and API Architecture, Authentication / RBAC / Shared IMS Integration, and Sprint 2 technical refinement/handoff.
- PM / cross-team: Sprint 1 scope and dependency reviews, Week 3 validation/readiness record, stakeholder and decision records, technology/integration meeting records, Playback evidence and Week 1 functional testing evidence.

3. Pre-Client-Feedback Core MVP at a Glance

Area	Consolidated baseline	Status
Primary workflow	Mentor Task Assignment → Intern Task Viewing / Handling → Individual Task Submission → Mentor Review / Completion. Weekly Progress remains a separate overall weekly reporting flow.	CONFIRMED
Task lifecycle	Assigned → In Progress → Submitted → Completed.	CONFIRMED
Task Assignment	Title, Description, Due Date, Assigned Intern and Priority are Mentor-entered. Assigned By is system-derived. Initial status is system-set Assigned.	CONFIRMED
Task Submission	Description is required. File attachment is supported and optional. A valid submission changes the task to Submitted.	CONFIRMED
Mentor completion	Mentor reviews Submitted work and uses Mark Completed to move Submitted → Completed. Intern does not self-complete.	CONFIRMED

Weekly Progress	One overall report per Intern per week. Accomplishments, Blockers and Next Steps are required. The report locks after a valid submission.	CONFIRMED
Lifecycle exceptions	Reverse / skip / reopen behaviour is not part of the confirmed forward Core MVP flow. Exception rules remain outside the baseline unless separately approved.	OPEN / NOT INCLUDED
Task Submission editing after submit	No dedicated edit/replace business rule is included after a successful submission.	OPEN
Weekly Progress ↔ task linking	User-facing linking is not required in this pre-feedback baseline and is deferred to Sprint 3 / future consideration.	DEFERRED

4. Confirmed Task Management Lifecycle and Business Rules

Assigned → In Progress → Submitted → Completed

- Assigned — created automatically when a permitted Mentor successfully assigns a valid task. The Mentor does not manually select the initial status.
- In Progress — the assigned Intern begins work through the permitted action.
- Submitted — a successful Individual Task Submission moves the task to Submitted for Mentor review.
- Completed — the permitted Mentor reviews the submitted work and confirms completion. The Intern does not receive a direct self-completion action.

4.1 Task Assignment rules

- Required Mentor-entered fields: Task Title, Description, Due Date, Assigned Intern and Priority.
- Priority values: Low, Medium or High.
- Assigned By / Mentor is derived from the authenticated assigning Mentor and is not a separate manual selector.
- Initial task status is system-set to Assigned.
- Task access remains limited to the permitted Mentor–Intern relationship and backend/resource authorization is required.
- Priority and Assigned By are part of the current baseline and are not optional/deferred items.

4.2 Status ownership

- Mentor: creates the task and later confirms Submitted → Completed.
- Intern: views own assigned tasks, progresses Assigned → In Progress and submits task-specific work to establish Submitted.
- System: establishes Assigned on creation and persists each valid status change.
- Only the forward lifecycle above is included in the current baseline. Reverse / skip / reopen behaviour is not added.

5. Confirmed Individual Task Submission Requirements

Individual Task Submission remains task-specific and separate from Weekly Progress. The latest UX handoff resolves the implementation-critical states and validation for this function.

- Available from the Intern Task Detail context for a permitted assigned task.
- Description is a required free-text field.
- File Attachment is supported through a real file picker and remains optional in the approved pre-feedback handoff.
- Submitting with an empty Description shows inline validation and does not advance the task status.
- A valid submission is stored against the relevant Task and Intern and changes the task status to Submitted.
- Submitted content is available to the permitted Mentor for review.
- While Submitted, the Intern has no direct action to mark the task Completed.

5.1 Task Submission acceptance statements

TS-AC01 — Given an Intern opens submission for a permitted task, when the submission form is displayed, then Description and Attach file controls are available; Description is required and attachment is optional.

TS-AC02 — Given Description is empty, when the Intern attempts to submit, then inline validation is shown, no valid submission is created and task status remains unchanged.

TS-AC03 — Given a valid Description is provided, when submission succeeds, then the submission is associated with the relevant Task/Intern and task status becomes Submitted.

TS-AC04 — Given a permitted Mentor opens review for a Submitted task, then the submitted task content is available for review.

6. Consolidated Mentor Review / Completion Requirements

- Before a Task Submission exists, the Mentor review view shows a clear not-yet-submitted / no-submission state.
- When a task is Submitted, the Mentor can review the submitted Description and attachment information where available.
- The permitted Mentor has a Mark Completed action for a Submitted task.
- Mark Completed changes Submitted → Completed and the completed state is reflected to the Intern.
- The Intern does not receive the Mentor-only completion action.
- Task Submission Review and Weekly Progress Review remain separate information within the Mentor workflow.

6.1 Completion-state note

Whether submitted Description / Attachment content remains visible after the task becomes Completed is not a confirmed business rule. It remains a non-blocking UX observation and does not change the confirmed Submitted → Completed lifecycle.

7. Consolidated Weekly Progress Requirements

- Each Intern submits one overall Weekly Progress report per reporting week.
- Weekly Progress remains separate from Individual Task Submission.
- Required fields are Accomplishments, Blockers and Next Steps.
- All three fields require validation; an empty/invalid submission must not create or lock a valid weekly report.
- After a valid Weekly Progress submission, the reporting week is locked in the current Core MVP. A second submission or edit action is not available for that reporting week.
- The relevant Mentor can review Weekly Progress for permitted Interns and a clear no-submission state is shown when no report exists.

7.1 Weekly Progress acceptance statements

WP-AC01 — Given an Intern has not submitted for the reporting week, when Accomplishments, Blockers and Next Steps are completed and submitted, then one Weekly Progress record is created for that Intern/week.

WP-AC02 — Given any required Weekly Progress field is empty, when the Intern submits, then field-level validation is shown and no valid report is created.

WP-AC03 — Given a Weekly Progress report already exists for the Intern/week, when the Intern returns to the flow, then the submitted/locked state is shown and another submission/edit is not available.

WP-AC04 — Weekly Progress remains a separate overall reporting record and does not replace or merge with Individual Task Submission.

8. Workflow and Post-Submission Behaviour

The pre-client-feedback implementation baseline carries forward a deterministic forward workflow while avoiding unsupported behaviour:

- Forward lifecycle: Assigned → In Progress → Submitted → Completed.
- Completion ownership: Mentor confirmation establishes Completed; the Intern does not self-complete.
- Lifecycle reversal / skip / reopen: not included in the confirmed baseline. Development should implement the forward flow only and must not add unsupported exception transitions.
- Task Submission after Submitted: no dedicated edit/replace behaviour is included in the baseline.

- Weekly Progress after submission: resolved through the one-report-per-week locked state; no second submission/edit action is available after successful submission.

9. Remaining Open Business-Rule Items

ID	Open item	Pre-feedback treatment
OR-PF01	Can statuses be skipped, reversed, reopened or changed after Completed?	Not part of the confirmed baseline. Implement the forward lifecycle only.
OR-PF02	Can an Intern edit or replace an Individual Task Submission after successful submission?	No dedicated edit/replace requirement is included.
OR-PF03	What file type, size or storage constraints apply to Task Submission attachments?	Attachment capability is confirmed; detailed technical/storage constraints remain an implementation detail.
OR-PF04	Should submitted content remain visible in the Mentor view after the task becomes Completed?	Non-blocking UX observation; not a confirmed business rule.
OR-PF05	Exact resource-level RBAC/RLS policies and shared Mentor–Intern relationship representation.	Backend authorization remains required; technical representation/policies remain implementation dependencies.

10. Functionality Already Deferred to Sprint 3 / Future Consideration

- User-facing linking between Weekly Progress and assigned tasks for the reporting period remains deferred to Sprint 3 / future consideration. Technical data support does not make it a mandatory pre-feedback UI requirement.
- Broader features previously removed from Team B Core MVP — full onboarding, attendance/availability, Mentor assignment, broad administration, performance evaluation, learning goals and mentoring-session notes — remain outside the committed Core MVP.

11. BA2 Comparison Reference — Pre-Client-Feedback Baseline

The table below is the comparison point for the following Client Feedback & Core MVP Requirements Re-alignment task. BA2 should compare later client-driven changes against this baseline rather than older Sprint 1 assumptions.

Baseline area	Pre-client requirement	Classification	BA2 comparison question
Task Assignment	Title, Description, Due Date, Assigned Intern, Priority; Assigned By system-derived; initial status Assigned.	Confirmed	Did later feedback change task-assignment fields or Mentor inputs?
Task lifecycle	Assigned → In Progress → Submitted → Completed; Intern submits, Mentor completes.	Confirmed	Did later feedback change stages, ownership or exception rules?
Task Submission	Required Description; optional file attachment; validation; valid submission → Submitted.	Confirmed	Did later feedback change submission fields, purpose, attachment or editing behaviour?
Mentor Review / Completion	Mentor reviews submitted content and confirms Submitted → Completed; Intern cannot self-complete.	Confirmed	Did later feedback change Mentor review scope or completion behaviour?
Weekly Progress	One overall report/week; Accomplishments, Blockers, Next Steps required; locked after successful submit.	Confirmed	Did later feedback change frequency, fields, editing or presentation?
Lifecycle exceptions	Reverse / skip / reopen rules not included in confirmed baseline.	Open	Did later feedback resolve exception rules?
Task Submission editing	No dedicated post-submit edit/replace rule.	Open	Did later feedback define editing/replacement?
Weekly Progress ↔ tasks	Not mandatory; deferred to Sprint 3 / future consideration.	Deferred	Did later feedback promote this into current scope?

12. BA Final Position

The Team B pre-client-feedback Core MVP baseline is consolidated into one implementation reference covering Task Management, Individual Task Submission, Mentor Review / Completion and Weekly Progress. Confirmed business rules are explicit, unresolved questions remain visible, Sprint 3-deferred functionality is separated from current scope, and the 23 September client feedback is intentionally excluded.

This document should be used as the stable pre-feedback comparison point for BA2 and as the implementation reference until the separate client re-alignment task formally changes an affected requirement.
