Sprint 3 Week 1 — Team A/B Role-Based Routing
BA Acceptance Testing

Project: Intern Management System for Social Enterprise Workforce Development
Client: Food Systems Collective (FSC)
Team: Team 40 / Team B
Role: Business Analyst
Business Analyst: Shakthijhaa Sivagnanam
Student ID: s4065078
Task: Independent Week 1 Team A/B Role-Routing Integration Acceptance Testing
Sprint: Sprint 3 — Week 1
Review date: 11 October 2026

1. Purpose and Review Basis

This document records my independent BA acceptance testing of the deployed Team A/B role-routing integration against the confirmed Sprint 3 Week 1 routing requirements and acceptance criteria (AC-RR01 to AC-RR12). The review checks whether Applicant, Intern and Mentor users reach the correct workspace after authentication, whether role-mismatched navigation is safely restricted, and whether the existing Team B Core MVP still works following the routing changes.

The review is based on the actual browser outcomes and screenshots captured on 11 October 2026. PASS is used where the tested behaviour matches the requirement; FAIL is reserved for a demonstrated mismatch; BLOCKED means the criterion could not be independently completed using the available roles, access or technical evidence. A successful frontend redirect is not assumed to prove server-side API authorisation.

2. Test Environment and Evidence

- Deployed frontend under test: https://intern-management-system-frontend-pi.vercel.app/.
- Browser: Google Chrome on macOS, using fresh Incognito sessions for role-routing tests and separate authenticated sessions for the Team B regression flow.
- Test users: newly registered "BA Sprint 3 Test Applicant"; authenticated Intern displayed as "This should work now"; authenticated Mentor displayed as "Team 40 Test Mentor".
- No Team A promotion action, database role edits, direct Supabase access or independent backend API-request tests were performed in this review.
- Evidence: EV01–EV12 (the screenshot panels in Appendix A). The original timestamped screenshots were supplied with the evidence bundle.

Source baseline: Team40_S3W1_Role_Based_Routing_Requirements.pdf; Team40_Sprint3_Week1_TeamAB_Role_Routing_Workspace_Alignment.pdf; the existing Team B Core MVP requirements and prior BA acceptance documents.

3. Acceptance Review Summary

PASS	FAIL	BLOCKED	Criteria assessed
7	0	5	12 (AC-RR01–AC-RR12)

Overall BA position: The tested Applicant, existing Intern and Mentor routing outcomes passed. Frontend role restrictions and the stale-destination protection scenario also passed. The existing Team B task lifecycle and Weekly Progress flow remained functional in the tested deployed build. The promotion-specific criteria, unsupported-role safety and independent API authorisation remain BLOCKED; therefore, this is a scoped acceptance outcome rather than unconditional final integration approval.

4. Role-Routing Acceptance Matrix

AC ID	Focus	Result	Evidence	BA finding
AC-RR01	Applicant routing	PASS	EV01	Fresh Applicant sign-in opened /application without manual URL navigation.
AC-RR02	Applicant negative access	PASS	EV04	Applicant requests for Intern and Mentor workspaces reached 403-labelled / unauthorized view.
AC-RR03	Promoted Intern routing	BLOCKED	—	The newly created Applicant was not promoted by Team A;

AC ID	Focus	Result	Evidence	BA finding
				existing Intern login was separately observed (EV02).
AC-RR04	Same-account continuity	BLOCKED	—	No before/after promotion using the same Applicant identity was possible in this session.
AC-RR05	Applicant default after promotion	BLOCKED	—	Requires Team A promotion and fresh sign-in using the same account.
AC-RR06	Mentor routing	PASS	EV03	Fresh Mentor sign-in opened /mentor/tasks/assign and resolved the Mentor identity.
AC-RR07	Intern cannot use Mentor workspace	PASS	EV04	Intern request for /mentor/tasks/assign was redirected to /unauthorized.
AC-RR08	Mentor cannot use Intern self-service	PASS	EV04	Mentor request for /intern/workspace was redirected to /unauthorized.
AC-RR09	Stale previous destination	PASS	EV05	Applicant sign-in with next=/intern/workspace did not open an Intern workspace; it ended at a safe 403-labelled page.
AC-RR10	Unsupported / missing role	BLOCKED	—	No approved unsupported-role test identity was available; a privileged fallback was not assumed.
AC-RR11	Backend authorisation retained	BLOCKED	—	Browser redirects alone do not establish negative protected-API response behaviour.
AC-RR12	Team B regression	PASS	EV06–EV12	Task lifecycle, Mentor completion, weekly submission/lock and Mentor weekly review worked in the tested flow.

5. Detailed BA Findings

5.1 Applicant, Intern and Mentor Routing — PASS for Tested Roles

A new test Applicant was created through the deployed registration form. After a fresh sign-in, the same account was automatically directed to Team A's /application Personal Information page. A fresh sign-in with the existing Intern account opened /intern/workspace, while the Mentor account opened /mentor/tasks/assign and displayed "Team 40 Test Mentor" after loading. These observations support the three tested role destinations, but the existing Intern account is not a substitute for the separate Applicant-to-Intern promotion test.

5.2 Role-Mismatched Navigation — PASS for Frontend Restrictions

Four direct navigation checks were carried out: Applicant to Intern, Applicant to Mentor, Intern to Mentor, and Mentor to Intern. Each ended at /unauthorized with the displayed 403 access-denied message. Protected role-specific pages were not usable through those browser routes. This verifies the observed frontend restriction outcomes; it does not by itself confirm backend API-level access denial.

5.3 Stale Destination Handling — PASS for Safe Denial

The test Applicant signed in using a URL that requested next=/intern/workspace. The application resolved to /unauthorized rather than allowing use of the incompatible Intern workspace. This satisfies the tested safety boundary. It does not demonstrate that a role-correct fallback to /application was selected; the exact visual fallback remains a UX/DEV implementation decision.

5.4 Team B Core MVP Regression — PASS for Tested Workflow

The authenticated Mentor created "S3W1 BA Regression Test" for the Intern displayed as "This should work now", with Medium priority and due date 18 October 2026. The Intern retrieved the task from My Tasks with initial Assigned status, started it to reach In Progress, and submitted a valid Description to reach Submitted. The Mentor reviewed the saved submission and used Mark completed, moving the task to Completed. Task data and status were visible across both authenticated role views.

Weekly Progress for reporting week 11 October 2026 was submitted with Accomplishments, Blockers and Next Steps. The Intern view displayed a success message and locked the submitted week; after refreshing the Mentor review, the new report was shown with the matching text as a read-only record. This checks the primary persisted reporting flow, but is not an independent HTTP 409 duplicate-request or exhaustive validation test.

6. Evidence Gaps and Additional Observation

Ref	Classification	Finding / treatment
GAP-01	BLOCKED	Promoted-Intern routing and shared account continuity require Team A to promote the test Applicant and preserve the existing identity. No promotion was executed.
GAP-02	BLOCKED	Backend API authorisation was not independently tested. The UI displayed 403-labelled pages, but underlying API response codes/data isolation were not measured.
GAP-03	BLOCKED	Unknown/unsupported-role fallback lacked a suitable approved test account. No database role manipulation was attempted.
ENV-01	LIMITATION	The tested Vercel URL and successful behaviours are recorded; a deployed commit or release identifier was not independently established.
OBS-01	FOLLOW-UP	The Mentor Review summary showed Overdue = 8 with Assigned = 4 and In Progress = 0 (after completion). The accepted BA definition counts overdue only for Assigned/In Progress tasks, so the figures merit verification of the query and summary scope. This is not counted as a confirmed role-routing failure.

7. BA Acceptance Outcome

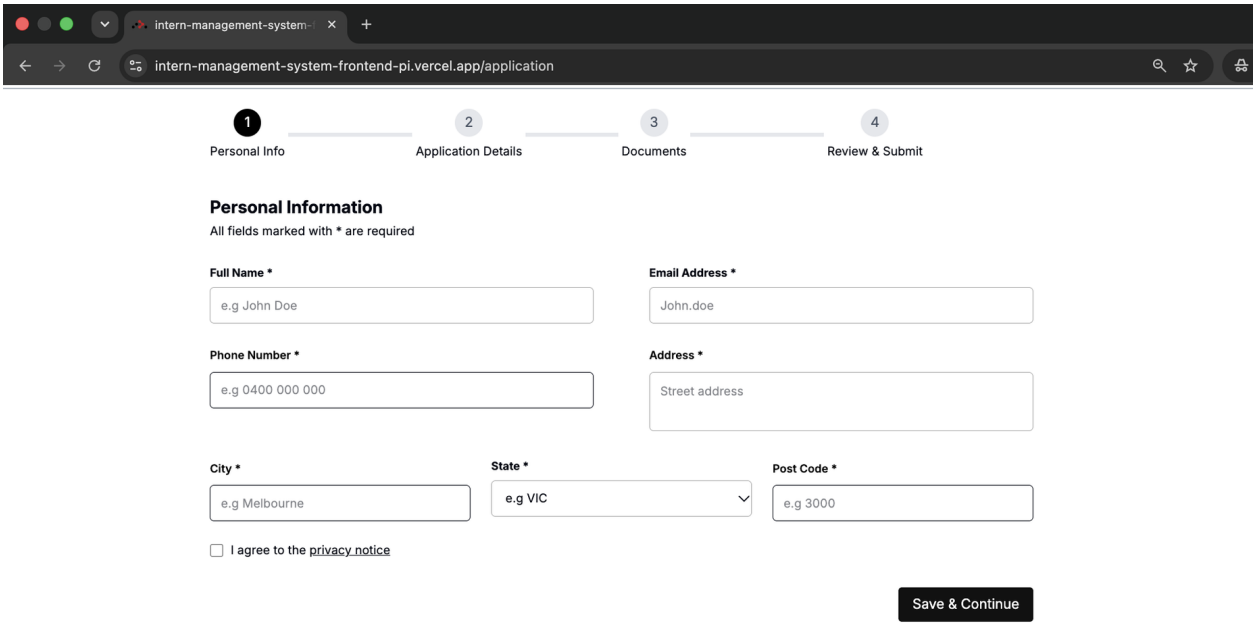

On 11 October 2026, seven of the twelve role-routing acceptance criteria were supported by direct UI or functional regression evidence; none of the executed criteria demonstrated a confirmed role-routing failure. Five criteria remain BLOCKED because they require Team A promotion activity, a supported negative-role test account, or independent backend API evidence. The Team B task and weekly reporting regression checks passed for the tested workflow, and one compact-summary calculation discrepancy is recorded for follow-up verification.

The current position is therefore acceptance of the demonstrated deployed behaviours only, with final end-to-end cross-team role-routing acceptance pending completion of the blocked verification areas. No additional product feature was assumed or added as part of this BA review.

Appendix A. Supporting Screenshot Evidence

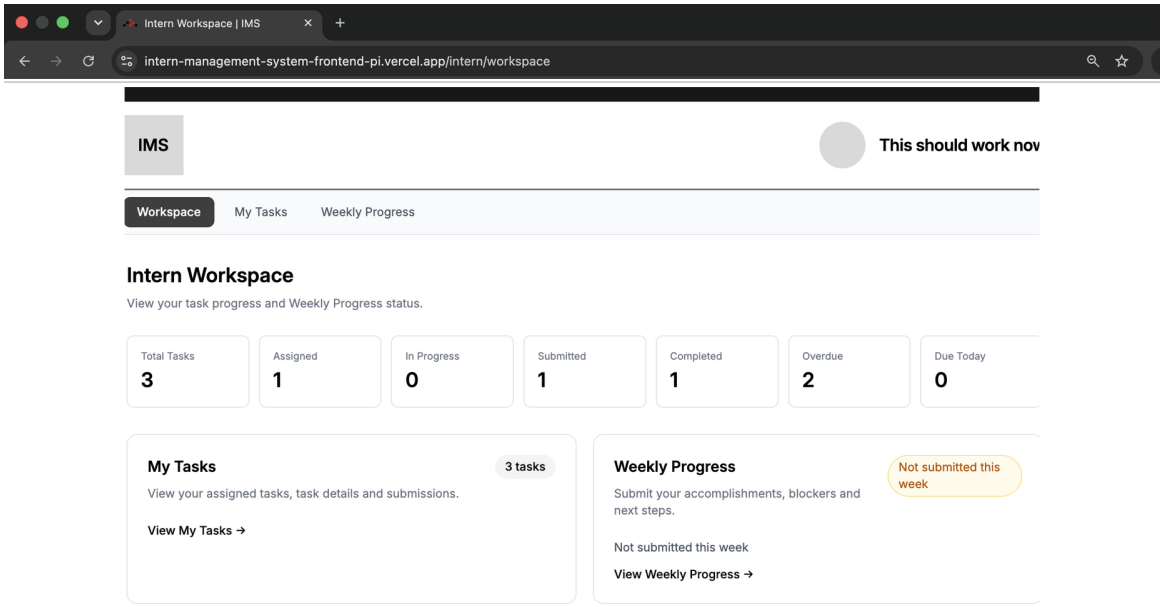

The figures below reproduce the relevant parts of the original screenshots. Browser address bars and principal UI states are retained. Some captures have been cropped for readability, and EV04 is a labelled four-case composite of separate source screenshots. Captions describe the observed outcome, not an inferred API response.

EV01 — Applicant sign-in opens Team A application

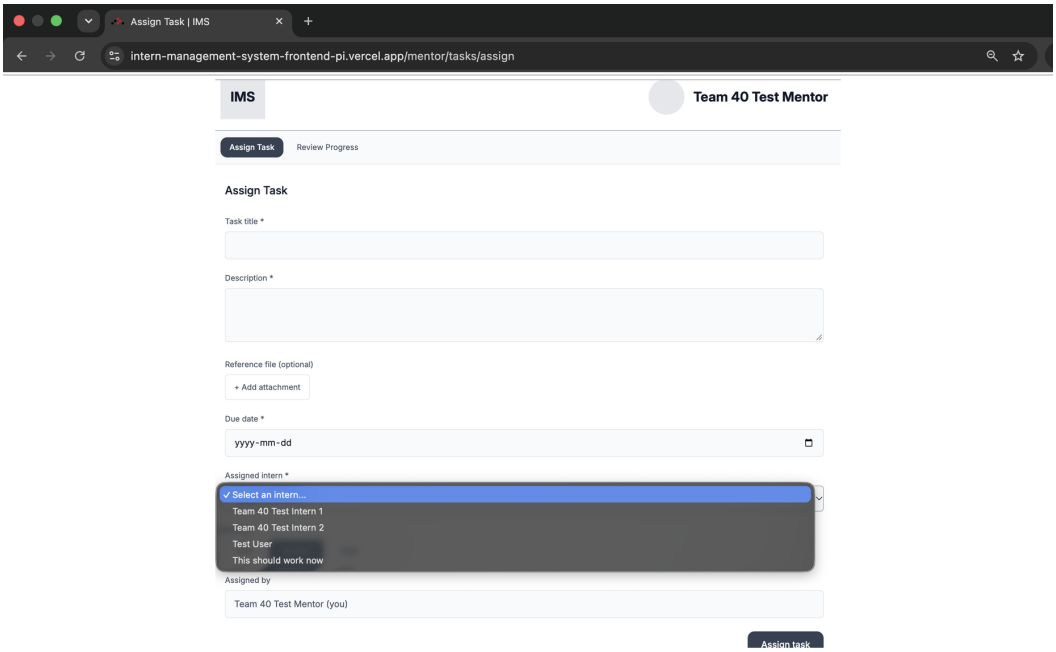

New Applicant account reached /application after fresh sign-in. Source: Screenshot 2026-10-11 at 21.41.47.png.

EV02 — Existing Intern sign-in opens Intern Workspace

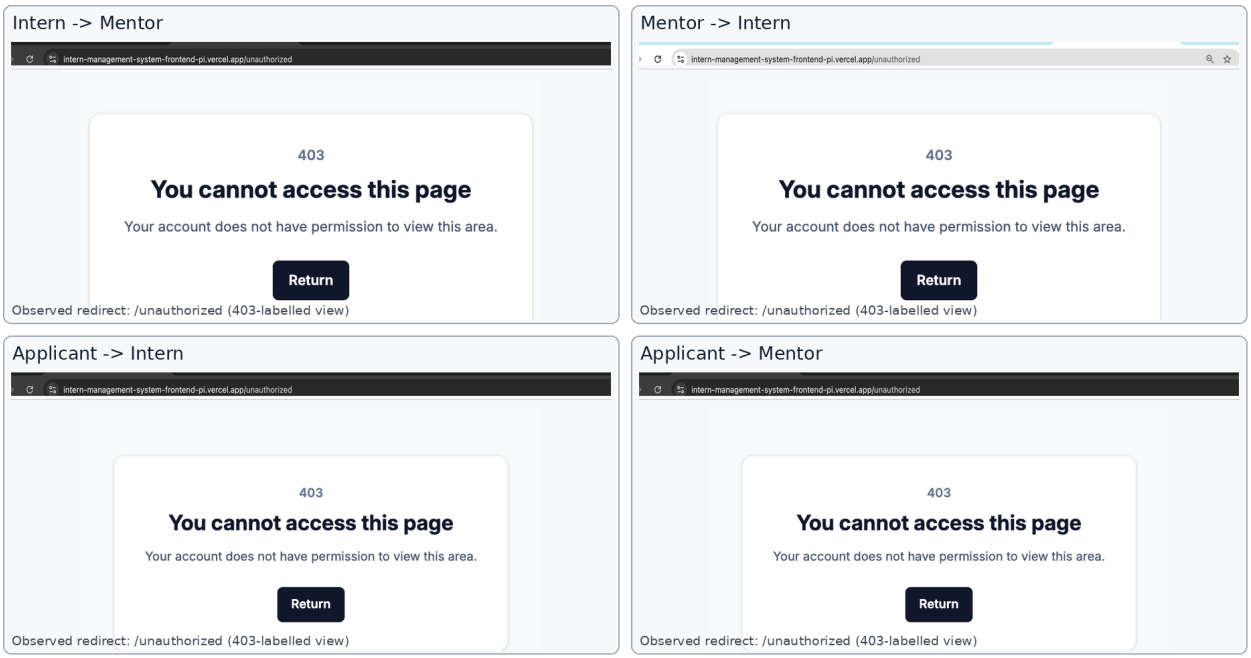

Existing Intern identity opened /intern/workspace. Source: Screenshot 2026-10-11 at 20.50.46.png.

EV03 — Mentor sign-in opens Assign Task

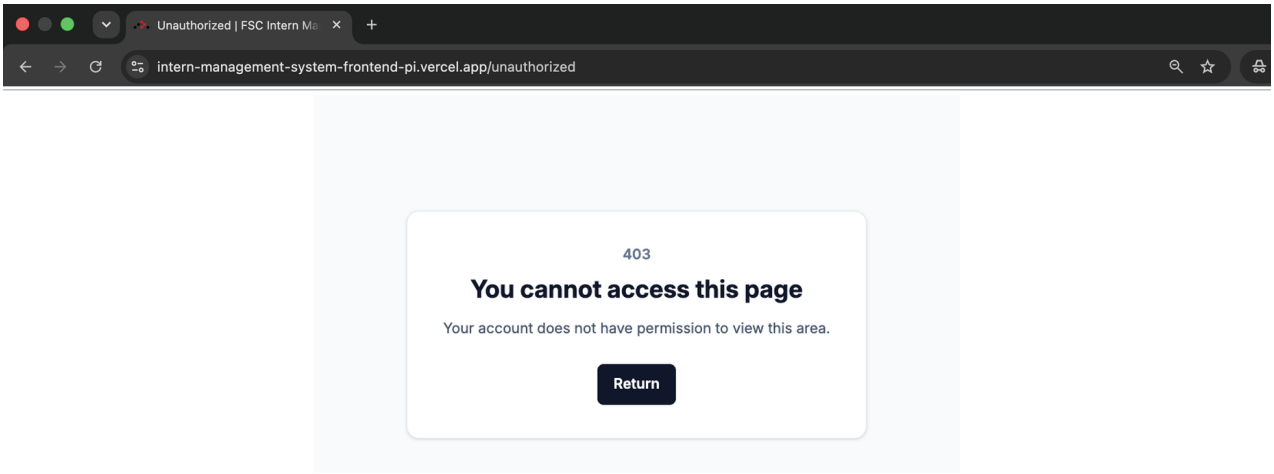

Mentor identity and permitted Intern selector loaded after login. Source: Screenshot 2026-10-11 at 20.56.19.png.

EV04 — Role-mismatched navigation is denied

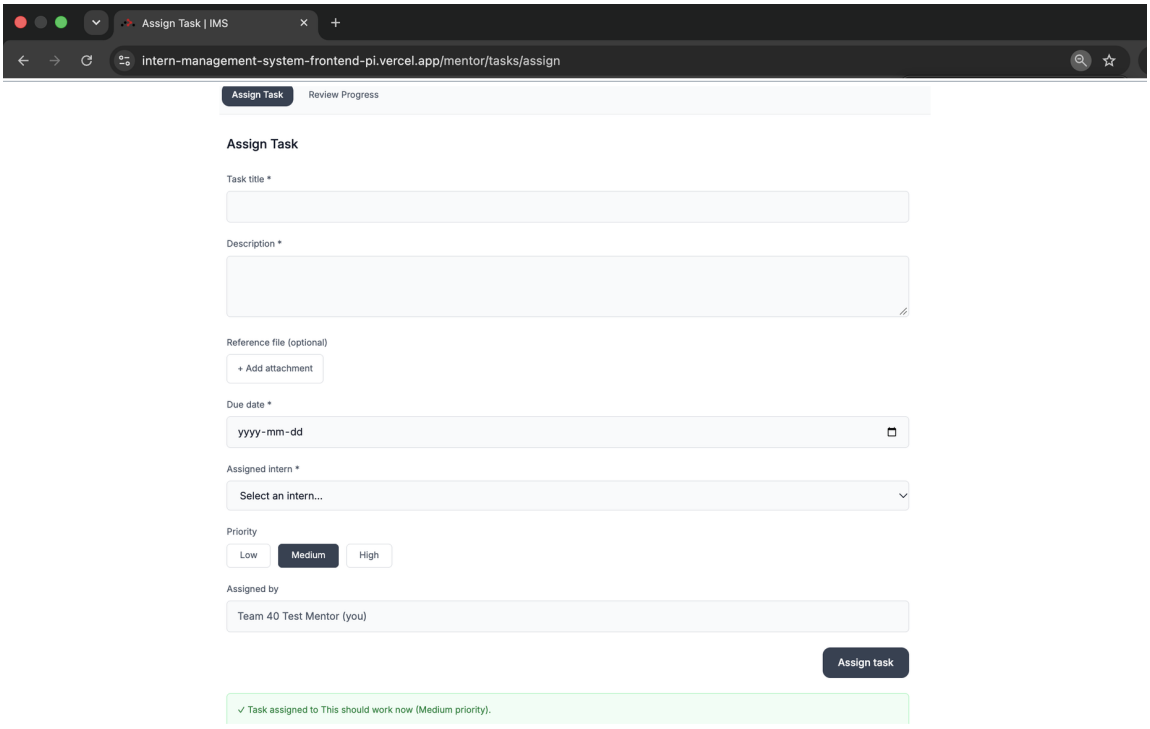

Four separate browser attempts ended at /unauthorized. Sources: screenshots at 20.52.50, 20.53.55, 21.42.46 and 21.43.28.

EV05 — Incompatible saved destination is safely rejected

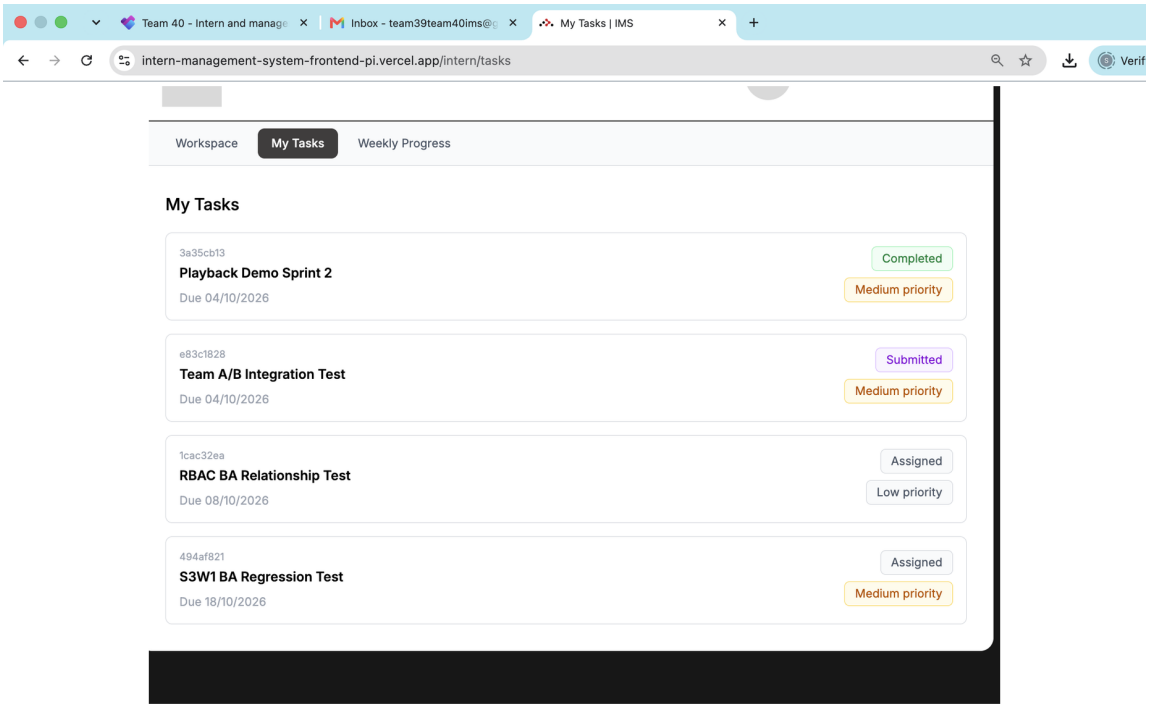

Applicant login with next=/intern/workspace led to a 403-labelled access-denied view. Source: Screenshot 2026-10-11 at 21.48.38.png.

EV06 — Mentor successfully assigns a task

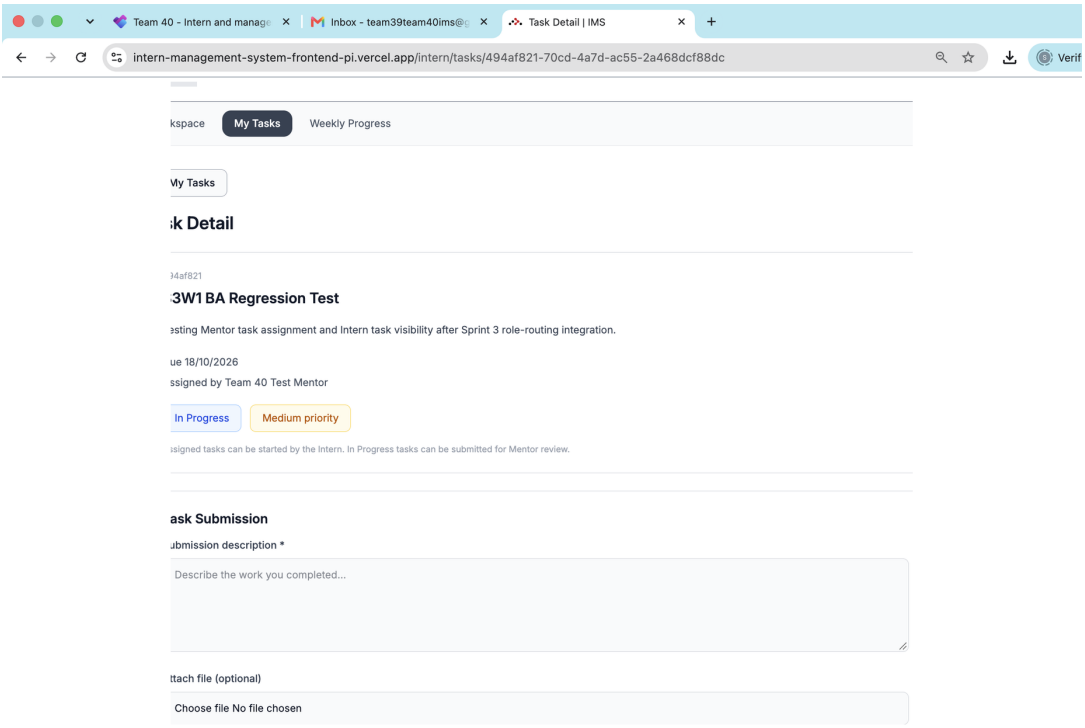

Success banner confirms assignment to "This should work now" at Medium priority. Source: Screenshot 2026-10-11 at 20.58.25.png.

EV07 — Intern receives new task as Assigned

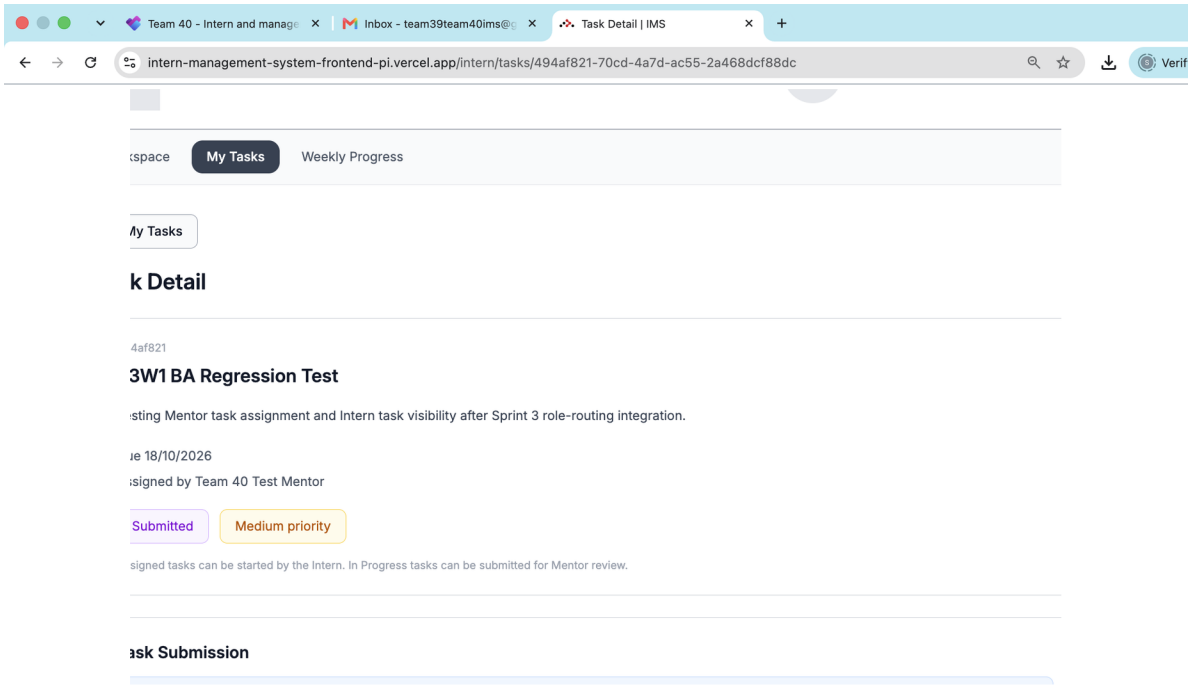

My Tasks contains the new task, due 18 October 2026. Source: Screenshot 2026-10-11 at 20.59.40.png.

EV08 — Intern starts task

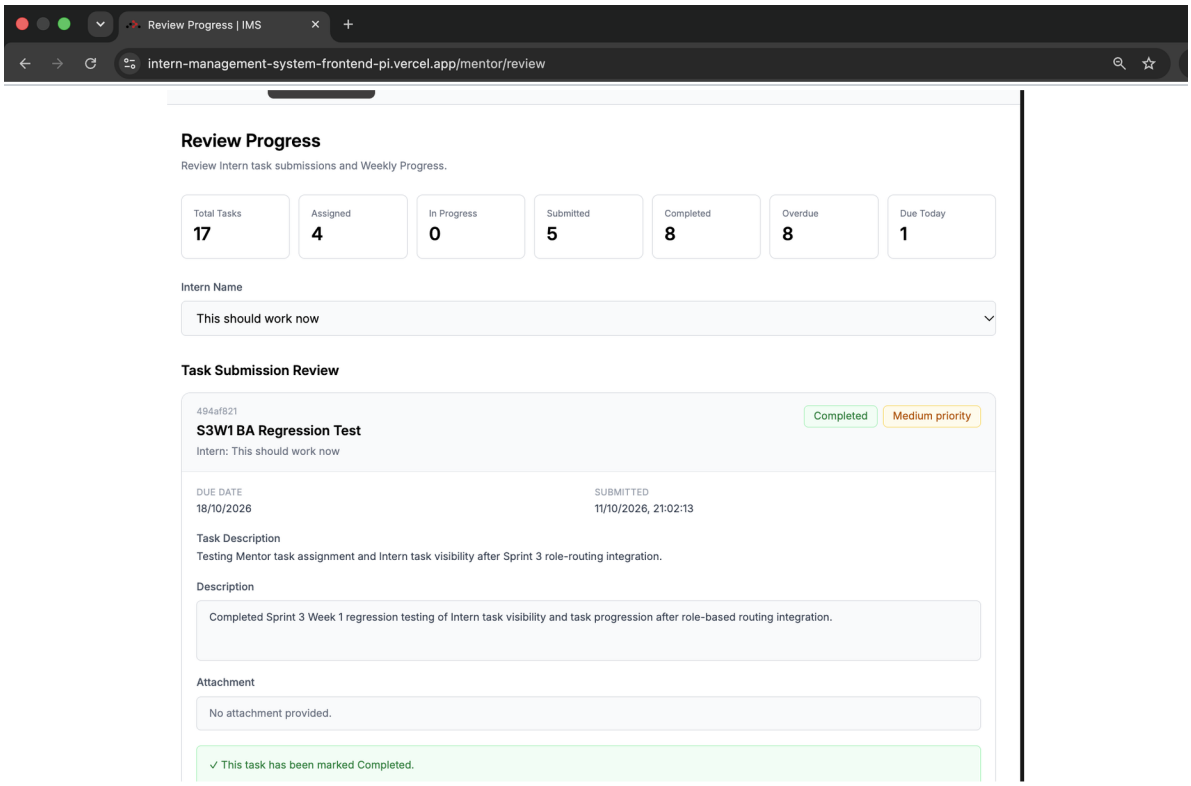

Task Detail shows In Progress and the submission form. Source: Screenshot 2026-10-11 at 21.00.27.png.

EV09 — Task submission reaches Submitted

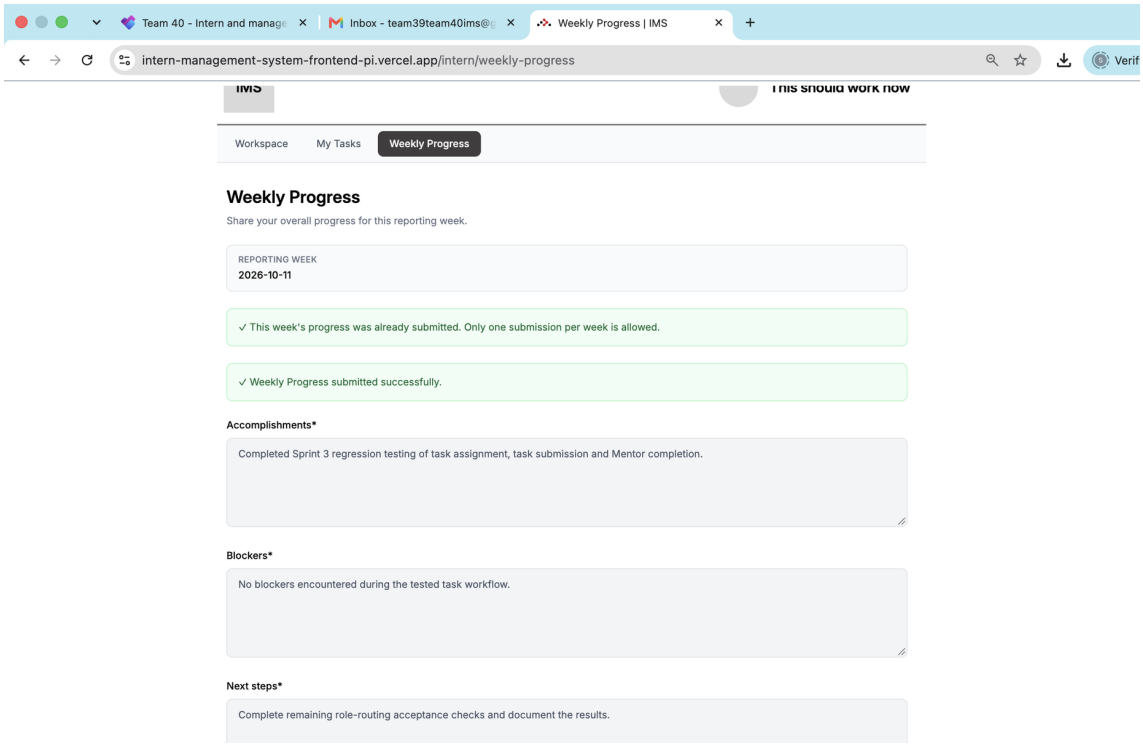

Task Detail confirms successful submission for Mentor review. Source: Screenshot 2026-10-11 at 21.02.18.png.

EV10 — Mentor marks task Completed

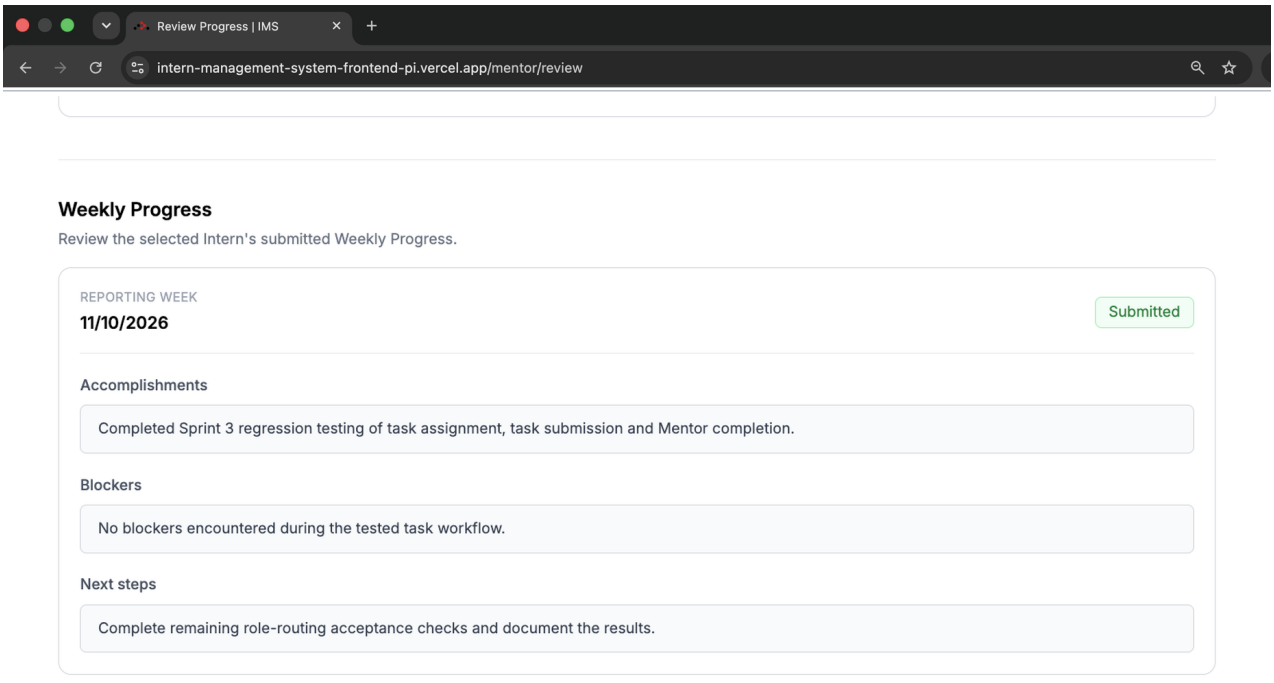

Review Progress shows the completed task and confirmation, with submitted Description retained. Source: Screenshot 2026-10-11 at 21.04.13.png.

EV11 — Weekly Progress submitted and locked

Intern Weekly Progress shows successful submission and week lock for 11 October 2026. Source: Screenshot 2026-10-11 at 21.31.00.png.

EV12 — Mentor reads new Weekly Progress

Mentor view displays the 11 October report with matching Accomplishments, Blockers and Next Steps. Source: Screenshot 2026-10-11 at 21.33.46.png.
